Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.

Series published in this Review are stored in CANSIM, the computerized time series data bank of the Dominion Bureau of Statistics. All or any part of the data bank contents may be purchased on magnetic tape or as computer printouts. For additional information, see inside back cover.

Selected Economic Indicators appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at the Dominion Bureau of Statistics is a computerized ratio-to-moving average method. The standard computer program used in the Bureau is the US Bureau of the Census Method II, X-11 version.

The *MCD*, or *Months for Cyclinal Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

* * * * * * *

SYMBOLS

The following standard symbols are used in this and other DBS publications:

..	figures not available
...	figures not appropriate or not applicable
–	nil or zero.
—	amount too small to be expressed.
†	advance estimates.
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

Section 1. Selected Economic Indicators

1. Labour Force 7
2. Industrial Production 8
3. Employment, Selected Industries 9
4. Income, Earnings and Hours 10
5. Retail Trade, New Motor Vehicle Sales 11
6. Construction 12
7. Exports and Imports 13
8. Selected Monthly Series 14
9. Income and Expenditure Accounts, Balance of International Payments 15
10. Real Domestic Product by Industry of Origin 16
11. Prices 17

Section 2. Population Statistics

1. Population, by Province 18
2. Immigration to Canada, by Country of Last Permanent Residence 18
3. Immigration to Canada, by Province of (Intended) Destination 18
4. Immigration to Canada, by (Intended) Occupational Group 18
5. Births, by Province 19
6. Deaths, by Province 19
7. Marriages, by Province 19

Section 3. System of National Accounts

1. Income and Expenditure Accounts

1.1. National Income and Gross National Product 20
1.2. Gross National Expenditure, Current Dollars 20
1.3. Gross National Expenditure, Constant Dollars 21
1.4. Sources of Personal Income 21
1.5. Disposition of Personal Income 22
1.6. Sources and Disposition of Gross Saving 22
1.7. Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government 23
1.8. Implicit Price Indexes 27
1.9. Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost 27

2. Domestic Product by Industry

2.1 Real Domestic Product by Industry of Origin, Quarterly 28
2.2 Real Domestic Product by Industry of Origin, Monthly 29
2.3 Industrial Production 31

3. Financial Accounts

3.1. Financial Flows 36

4. Balance of International Payments

4.1. Canadian Balance of International Payments, Current Account, All Countries 38
4.2. Canadian Balance of International Payments, Current Account, Country Distribution 38
4.3. Canadian Balance of International Payments, Capital Account, All Countries 39

Section 4. Labour

1. Wages and Salaries, by Province 40
2. Wages and Salaries, by Industry 41
3. Labour Force 42
4. Labour Force, by Region 42
5. Employed, by Region 43
6. Employed Non-agriculture, by Region 43

Section 4. Labour – Concluded

7. Unemployed, by Region 44
8. Unemployment Rate, by Region 44
9. Not in the Labour Force, by Region 45
10. Activities of Unemployment Insurance Commission 45
11. Time Lost in Work Stoppages 46
12. Employment Indexes, Industrial Divisions 47
13. Employment Indexes, by Province 48
14. Employment Indexes, Manufacturing 49
15. Wages and Salaries, Industrial Divisions 49
16. Wages and Salaries, Manufacturing 50
17. Wages and Salaries, by Province 50
18. Average Hourly Earnings 51
19. Average Weekly Hours 52

Section 5. Prices

1. Industry Selling Price Indexes 53
2. General Wholesale Index 56
3. Other Wholesale Price Indexes 56
4. Consumer Price Index 57

Section 6. Manufacturing

1. Total Inventories, Shipments, Orders 58
2. Manufacturing Shipments, Selected Industries 59
3. Manufacturing Inventories, Selected Industries 61
4. Manufacturing Shipments and Unfilled Orders by Economic Use Classification 63
5. Manufacturing Inventories Owned and Raw Materials by Economic Use Classification 64
6. Manufacturing Goods in Process and Finished Products by Economic Use Classification 65
7. Tobacco and Beverages 66
8. Rubber 66
9. Rubber Products 67
10. Raw Hides, Skins, Finished Leather 67
11. Production of Leather Footwear 68
12. Primary Textiles 68
13. Production of Sawn Lumber 69
14. Pulpwood, Woodpulp and Newsprint 69
15. Primary Iron and Steel 70
16. New Motor Vehicles 71
17. Refrigerators, Freezers, Washing Machines and Clothes Dryers 72
18. Radio and Television Sets 72

Section 7. Fuel, Power, Mining

1. Total Electric Power 73
2. Electric Power Available, by Province 73
3. Coal and Coke 74
4. Crude Oil and Natural Gas 74
5. Petroleum Products 75
6. Metals 76
7. Non-metallic Minerals 77

Section 8. Construction

1. Building Permits, by Type 78
2. Building Permits, by Province 78
3. Dwelling Units, Started, All Areas 79
4. Dwelling Units, Completed, All Areas 79
5. Dwelling Units, Under Construction, All Areas 79
6. Dwelling Units Started, Centres 10,000 and Over 80
7. Dwelling Units Completed, Centres 10,000 and Over 80
8. Building Materials 81
9. Mortgage Loans, Approvals 82

Section 9. Food and Agriculture

1. Farm Cash Receipts, by Source 83
2. Farm Cash Receipts, by Province 83
3. Farm Implement and Equipment Sales at Wholesale Prices, by Province 83
4. Slaughter and Cold Storage Stocks 84
5. Selected Agricultural Prices 84
6. Exports of Grains and Livestock Products 85
7. Milk, Milk Products and Eggs 85
8. Fish 86
9. Manufactured Food 86
10. Sugar 87

Section 10. Domestic Trade

1. Value of Retail Trade 88
2. Department Store Sales and Stocks 90
3. Wholesale Sales 90
4. Chartered Banks' General Loans 91
5. Retail Credit, by Type of Store 91
6. Consumer Credit, Selected Holders 92

Section 11. External Trade

1. Merchandise Exports, Major Countries and Areas 93
2. Merchandise Imports, Major Countries and Areas 94
3. Merchandise Exports, by Commodity 95
4. Merchandise Imports, by Commodity 97

Section 12. Transportation

1. Carloadings of Revenue Freight 99
2. Railway Operating Statistics 100
3. Operating Statistics of Canadian Motor Carriers 100
4. Operating Statistics of Canadian and Foreign Air Carriers 101
5. Operating Statistics of Canadian Pipelines 101
6. Shipping and Canal Traffic 102

Section 13. Finance

1. Bank of Canada 103
2. Chartered Banks 104
3. Currency and Chartered Bank Deposits 105
4. Cheques Cashed in Clearing Centres 106
5. Life Insurance Sales 107
6. Life Insurance Payments 107
7. Security Issues and Retirements 108
8. Security Prices 109
9. Stock Exchange Statistics 110
10. Commercial Failures and Liabilities 110
11. Government Revenues 111
12. Government Expenditures 111

NOTE TO USERS

Section 4, Tables 1, 2, 12-19 – Employment Indexes

February, March and April data for these tables of Section 4 are not currently available. It is expected that this information will be contained in the next issue of this publication.

THE RESEARCH AND ANALYSIS CONTENT OF STATISTICAL PROGRAMS[1]

S.A. Goldberg and T. Gigantes*

Introduction

It is by no means easy to define the terms "research" and "analysis" in a way as to distinguish unequivocally between them. It is also difficult to distinguish between these terms and certain regular activities of the statistical production process. We hope that the notions these terms are meant to convey in this article, which is written from the point of view of experience in the Dominion Bureau of Statistics, will become evident as we proceed.

As a general guide, we consider research as an activity designed to bring forward new knowledge, usually involving considerable study, testing and experimentation. As applied to statistical programs, the activity is undertaken with a view to implementing a change for the better — in the character or composition of the statistical output; in the method of producing it; or in the manner and detail in which it is presented. The process of testing, evaluating and generalizing research findings necessarily involves a degree of analysis, but the word analysis is often applied to the statistical end-products. In addition to the evaluation of the statistical end-products (that is, the probing of the consistency and the validity of the data) analysis connotes their summarization in a way as to highlight the major features they convey, as well as their interpretation in the light of associated events. Such analysis frequently is indistinguishable from research. While the distinction between "research" and "analysis" is thus highly arbitrary, we shall employ the former in relation to the process of developing and producing statistics and the latter in relation to the resulting statistics.

The process of producing reliable and timely statistics involves many intellectually challenging activities which are akin to those conveyed by the terms "research" and "analysis". Major changes in the statistical process — whether they take the form of new statistical series, of significant improvements in existing data, or in the efficiency of producing them — are not a matter of routine. They are usually intricate and time-consuming; they involve much study, testing and experimentation. This arises from the complexity of the statistical production process or from the complexity of the events being measured, or both.

Thus the notion that a statistical office is nothing more than a "figure factory" is wrong. This notion is a factor (among others) which is responsible for the fact that many university graduates prefer work which involves using statistics rather than producing them. Yet, in order to achieve the objective of satisfying contemporary needs for statistical data, it is essential that the statistical office should be able to attract high caliber people who are often motivated by opportunities to do "research" and "analysis".

Thus we feel that it would be worthwhile on these grounds alone to review those activities of the statistical process which involve research and analysis, as this article attempts to do. In addition, with increasing automation, the research and analysis components of the statistical activity are likely to become at once more necessary and more feasible. To make due allowance for this, in planning future resource allocation and training programs, management of statistical offices must be fully appreciative of the role of research and analysis in satisfying the changing and growing expectations of users.

The question is sometimes asked: what kind of research, how much research and what kind of analysis and how much analysis is it appropriate for a statistical office to do? It will be clear from the review that follows what kind of research and analysis we believe that a statistical office should strive to do. How much is actually done depends on circumstances, especially the caliber and number of professional personnel and the kind of specialized know-how acquired by them. Unless it is in the right hands, research is wasteful and analysis dangerous. A rule which we have insisted on is that the impartiality of the statistical office must be maintained: published commentary must be factually based and objective, with no value judgments in regard to policy.

Research and the Development and Production of Statistics

There are many interrelated links in the chain of events which result, eventually, in the regular release of statistics. Typically, the developmental work of a new survey starts after the need for the data is established and typically, this involves some research. Having established the need, the first step is to translate abstract concepts into measurable definitions, frequently a difficult process. Many phenomena are difficult to measure because little is known about them initially or because the concepts underlying them are difficult to pin down in precise enough terms to provide meaningful statistics. This is particularly true when regular records of the phenomena being measured are not kept by the respondent. Where records are kept, problems can arise because they are often not in a form needed for statistical purposes. Thus considerable experimentation and field work is often involved. As more is discovered about the character of the events being measured, the various phases of the survey are adjusted. Through a series of successive approximations a system is finally created, yielding statistical results which can be endorsed as adequate in view of the purposes the data are designed to serve and the funds available. Thus, the development of meaningful statistics necessarily involves considerable work which is akin to that often conveyed by the word "research".

---

* Dr. Goldberg is Assistant Dominion Statistician for Integration and Development; Mr. Gigantes is Director of Input-Output Research and Development.

[1] Prepared for the Seventh Conference of Commonwealth Statisticians, New Delhi, India, November 16-27, 1970.

This is also true of established series. Statistics are designed to help people to adjust to a changing world and adjustments are, therefore, required in the statistics produced: e.g., revisions in the consumer price index to take account of the changing composition of purchases; periodic revisions in standard classification systems to reflect changes in the economic and social structure; revisions to various aggregates to assimilate new or better information. Revising data to make them reflect, more accurately, changing conditions in the real world is an important element of the statistical production process which usually involves a great deal of testing, experimentation and study. Incidentally, these occasions are frequently used to render concepts more up-to-date and improve definitions and methods, again involving research.

Because statistical series are usually used in conjunction with other statistics and seldom in isolation, they must be constructed as an integral part of a mutually consistent overall design. To accomplish this it is necessary to develop tools of integration, in particular, standard classification systems (industry, commodity, occupation, region, and so on) and conceptual frameworks such as the system of national accounts. The development or adaptation of such classification and conceptual frames and the organization and adjustment of data to fit them involve a great deal of research.

Contemporary demands are not only for more detailed and reliable statistics but for more timely statistics. Production of timely statistics is to a large extent a management problem but also involves research. Earlier cutoff dates involve the development of proxies for missing data and the determination of the key respondents from whom information must be available for the estimates to be reliable. Early estimates, especially of aggregates such as national income and expenditure, may involve the construction of models to estimate partially missing components from the available data. Difficult trade-offs between timeliness and quality must be made requiring considerable experimentation and testing.

Similarly, the demands for more information by relatively small geographic areas have intensified the need for research in the statistical office. Small area information for intercensal years in particular requires piecing together of survey statistics with data from administrative records and the development, at times, of complex estimation and evaluation techniques.

Research is involved in developing new or more efficient **methods** for collecting, processing, retrieving or disseminating information. A major illustration is the development, adaptation or application of mathematical theories of sampling and of other survey methodology; these techniques have opened up new frontiers of statistical data collection, processing and error evaluation. Again, a great deal of testing and experimentation is involved when major surveys are automated. The various elements of the survey must be automated with due regard to the final overall outcome, rather than the impact of one or several steps. Considerable research is also involved in the development of general automated systems of survey processing, such as of data storage, retrieval, editing, sample selecting, and so on.

Research and Projections

With the growing attention to planning in various sectors of the Canadian economy, there has been a growing demand for projections of population, labour force and school enrolment. Since projections are basically the arithmetic consequences of the assumptions underlying them, it is essential that the latter should be as realistic as possible. This involves extensive research into the individual components comprising the projections – mortality trends, fertility trends, immigration and emigration, and so on. Such research is ultimately intermingled with analysis, to which we now turn. Before doing so, the following illustrations of research activities in DBS are cited:

Illustrations of Research Activities in DBS

(a) research leading to improved design of sample surveys and censuses;
(b) research in developing generalized survey processing systems;
(c) research in methods for developing or improving input-output accounts; income and expenditure accounts; national financial flows; real output indexes; balance sheets showing stocks of real capital and financial assets and liabilities;
(d) research into methods for compiling and/or inferring information on small regions;
(e) research into the measurement of flows through the educational systems;
(f) demographic research.

The Analysis and Publication of Statistics

Analysis is involved in preparing reliable statistical data for publication, even when the results of the analysis, as such, are not published; it is difficult to distinguish between this aspect of the statistical process and the activities outlined above. At various stages of the statistical process, judgments must be made on whether the results up to that stage make sense, and this frequently involves systematic probing of the consistency of the data. Such probing becomes particularly critical at the final stages prior to publication and is especially vital in the preparation of estimates which are used as current economic indicators. Thus, prior to publication, the Canadian quarterly (and annual) income and expenditure and financial flow accounts are subjected to extensive exploration for internal consistency and consistency with an array of related statistics. Such exploration represents an activity frequently conveyed by the word "analysis".

In addition to this type of analysis (aiming to ensure that the data are as consistent and valid as possible) there is the type which consists of distilling the highlights of the statistical results and expressing them in literary form. Standard comparisons and interrelationships are presented. The process of producing and presenting statistics is often incomplete if it does not include this type of analysis. Numbers, even if reliable and valid, are not enough to convey information to the public. This type of analysis must be non-controversial and yet avoid blandness; it is a difficult combination of objectives to achieve, and requires high caliber skills.

Another type of analysis is employed to explain changes in movements and relationships of the data in the light of associated events, with the intent of interpreting their significance. Such analysis requires not only familiarity with the data but a more complete grasp of relevant theory and the general institutional and other factors at play. The process of writing up such analysis provides a discipline and stimulus for exploring more deeply the validity and significance of the statistical results. It is essential to ensure that such a narrative, especially if it is intended for publication, is prepared by qualified people who have the capacity for detecting and explaining significant trends and interrelationships in the face of detailed and, at times, conflicting data. In the case of DBS, commentary of this type is included in the published quarterly reports on income and expenditure, financial flows, and balance of payments, among others.

A similar but more general type of interpretive analysis involves a synthesis and sifting of large masses of data derived from censuses and surveys. This requires thorough familiarity with the characteristics of the data as well as competence to bring out and describe the underlying features from a massive amount of detail. Recent examples in Canada are a series of 1961 Census monographs (on fertility, income, labour force, migration, post-war immigrants, urban growth and merchandising), and a series of analytical reports, based on special questionnaires attached to the Canadian Monthly Labour Force Survey, covering a broad range of topics (such as educational attainment, annual work patterns, geographic mobility, occupational distribution, female labour force participation, and so on). Such work has important benefits in that it helps to clarify difficult conceptual, methodological and presentational issues and provides a vital feedback for planning future statistical programs.

Increasingly, because of the long lead time involved in developing data, statistical agencies must exercise foresight about the lines of analysis which are likely to become important in future years. The decisions on priorities made by the statistical office have a considerable and perhaps decisive influence on the shape of analysis that the users will be able to make in the future. In order to carry out these decisions in a perceptive and responsible way, it is necessary for the statistical office to be intimately familiar with the prevailing analytical developments. This is best achieved by being involved directly in analysis to some extent.

Statistical offices have a comparative advantage over other agencies in carrying out certain types of analysis. Often the same skills are required for the research discussed above and for related analysis. Once these skills are acquired, analysis becomes a natural extension of the research. This is particularly important where intimate knowledge of the data is a prerequisite for doing authoritative analysis or, as already intimated, where the analysis requires bringing together masses of data from various parts of the statistical system. Furthermore, triggered by basic needs but facilitated by the computer, an increasing proportion of analysis operates on highly disaggregated data. This also necessitates great familiarity with a massive amount of detail — a familiarity which evolves through working with the data in analysis. It is thus likely that considerations of effectiveness and economy will extend forward the production boundary of statistical offices. Another factor promoting such extension is the confidentiality provisions of the Statistics Act which render impossible certain types of detailed analysis outside the statistical office. These factors are thus conducive to creating an intellectually attractive environment which helps in recruiting high caliber people.

Finally, mention should be made of a variety of analytical tools, such as ratios, regressions, diffusion indexes, and other quantitative relationships, These should be keyed on the subsequent analysis which will be made by users. Computer technology has made it possible to construct such analytical tools in a vast amount of detail and to the extent that the needs of users can be satisfied by such quantitative relationships rather than by the raw data, this helps overcome some of the analytical restrictions on outside users which are imposed by the secrecy provisions of the Statistics Act.

The following summary of analytical activity in DBS is provided for illustration:

(a) monographs based on information collected during decennial censuses;
(b) special labour force studies exploring various characteristics of the labour force and their relationship with various economic and social factors;
(c) studies of consumer finance and income distribution;
(d) models of the economy based on input-output tables;
(e) studies of industrial concentration;
(f) models for advance estimates of the quarterly income and expenditure accounts;
(g) models for population projections;
(h) analysis of balance of payments and non-resident investments;
(i) analysis of quarterly financial flows.

SELECTED ECONOMIC INDICATORS–SEASONALLY ADJUSTED

INDUSTRIAL PRODUCTION (More detail in Section 3, Table 2.3)

THE SEASONALLY-ADJUSTED INDEX OF INDUSTRIAL PRODUCTION DECREASED BY 0.8 PER CENT FROM 172.5 IN MARCH TO 171.2 IN APRIL. ALL DIVISIONS SHARED IN THE DECLINE. THE MAJOR GROUPS RECORDING THE MOST SIGNIFICANT CHANGES WERE MINERAL FUELS, PAPER AND ALLIED INDUSTRIES, PRINTING, PUBLISHING AND ALLIED INDUSTRIES, TRANSPORTATION EQUIPMENT AND ELECTRIC POWER UTILITIES.

		total industrial production (1961=100)	manufacturing (1961=100)			(1961=100)

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documenta evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Censu of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number i non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancée and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Excludes profits of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and other government investment income. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts, Fourth Quarter 1970 (D. B. S. 13-001).**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than governmen business enterprises. Excludes defence construction and equipment which are defined as current expenditure. [3] Includes capital expenditures by private and govern ment business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to includ all transfer costs on the sales and purchases of the existing land and buildings. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this valu of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1) [5] See footnote 4, Table 1.1 **Source National Income and Expenditure Accounts, Fourth Quarter 1970 (D. B. S. 13-001).**

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[1] Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment of insurance. [2] Excludes the refundable tax on corporate cash profits introduced May 1966. Refunding of the tax began in the third quarter 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1.9.**

---

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1. 9.**

[1] A minus sign except for official monetary movements, indicates an outflow of capital from Canada. [2] Includes guaranteed issues. [3] Bank balances and other short-term funds abroad (excluding official reserves). [4] Includes changes in loans and accounts receivable and payable, and also balancing item representing difference between direct measurements of current and capital accounts. [5] Canada's Special Drawing Rights are shown for the first quarter 1970. SDR's were issued January 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement. **Sources for above tables: Annual and Quarterly Estimates of the Canadian Balance of International Payments (67-201 and 67-001), D. B. S.**

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries, (72-002), D. B. S.**

[1] See footnote 1 and source in Table 13. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 12. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

---

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review. **Source: Prices and Price Indexes (62-002), D. B. S.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

monthly averages or months	shipments[1]	new orders received during month[2]	unfilled orders at end of month[3]	inventory at end of month						ratio of inventories owned to shipments
				owned[4]	held but not owned	all inventory held				
						total	raw materials	goods in process	finished products

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Annual figures for inventories and unfilled orders are end of December values. [4] Total manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.**

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders In Manufacturing Industries (31-001), D.B.S.**

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

---

[1] Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications. i.e. girls' under size 4 and infants' and "little children's". **Source: Footwear Statistics (33-002), D. B. S.**

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. [5] Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry. **Source: Primary Iron and Steel (41-001), D. B. S.**

---

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), D. B. S.**

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. **Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Trade of Canada, Exports (65-004), Imports (65-007), D.B.S.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gross new production by field less field flared and waste. [4] By gas utilities, does not include imports. **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), D. B. S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosena and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are available on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William - Port Arthur (Thunderbay City). **Source: Building Permits (64-001), D. B. S.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the tabl due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normall follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerabl change may develop before the completion of the operation. **Source: Building Permits (64-001), D. B. S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

[1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse products, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act. **Source: Farm Cash Receipts (21-001), D. B. S.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D. B. S.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They ref average of wages paid to all male farm help regardless of age and skill. Data available for Jan., May and Aug. only. [3] Excl. of NFLD. Western grain prices u in the construction of the Index prior to Aug 1, 1967 are final. From Aug 1, 1967 to date, the western grain prices used in the Index are initial prices only for wh oats and barley. [4] The number of bushels of No. 1 feed barley, or cwt of mixed feed, that equal in value 100 lbs. of Grade B live hog. Effective January 19 equal in value to 100 lbs. of Index 100 live hog. [5] Price of 100 lbs. good steer as a % of the price of 100 lbs. live hog, Grade B, or good lamb. Effective Jan 1969, as a % of the price of 100 lbs. live hog, Index 100. [6] Price of 100 lbs. good steer as a % of the price of 100 lbs. good lamb. [7] Quotations refer to steers weights. [8] Grade "B" hogs. Effective Jan 1969 prices based on Index 100, hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farm (62-004); Farm Wages in Canada (21-002) Occasional; Course Grains Quarterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), D. [1] Monthly totals for current years are not equivalent to annual data due to receipt of additionnal statistics which cannot be allocated by months. [2] Include also seaweeds and other species such as whales, worms etc. [3] Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils offal, livers, fish roe n.e.s. and fishery foods and feeds n.e.s. [4] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, D. B. S.**

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all oth stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Sourc Retail Trade (63-005), D. B. S.**

Note: Components may not add to totals due to rounding and partial revisions. [1]Fully secured by marketable bonds and stocks. Excludes loans to finance the purchase of Canada Savings Bonds. [2]Includes loans on the security of household property. [3]Not available on a monthly basis. [4]Includes loans to finance companies which are affiliates of retail merchandisers. [5]Religious, educational, health and welfare institutions. [6]Differs from general loans in Section 13, Table 2 by the exclusion of loans to instalment finance companies. **Sources: Statistical Summary of the Bank of Canada and Dept. of Finance.**

[1] Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly servi credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. See als **Credit Statistics (61-004)**. [2] Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings a treated jointly beginning in January 1970. [3] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with th financing of retail purchases of consumers' goods and repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for Decemb 1970, the net figure was lower than the gross figure by 13.5 per cent. [4] Starting with January 1970, the sales finance companies component of consumer credit h been changed by the transfer of passenger cars financed for commercial purpose, from consumer goods to commercial goods. [5] Personal cash loans of up to $1,50 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [6] Personal cash loans of over $1,500. usual repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure 16.5 per cent. [7] The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series a repeated in the unadjusted form. [8] Beginning in January 1971, the Other Personal Cash Loans and Installment financing components do not include interest and oth unearned income finance charges. **Sources: Credit Statistics (61-004), D. B. S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. of Agricultur**

---

[1] Column numbers refer to tables 3 and 4 section. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculat separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most import are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade Canada, Exports (65-004), D. B. S.**

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machin have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Impo (65-007), D. B. S.**

Table 1: carloadings of revenue freight on Canadian railways[1] (thousand cars)

			farm products and food						mine products					forest products		
monthly averages or months	total railway revenue freight loadings (carload and non-carload) (000 tons)	total revenue cars loaded (carload only)	wheat	other grain and grain products	fresh fruits and vegetables	other agriculture products	animals and their products	prepared food products	iron ore and concentrates	other metal ores and concentrates	potash[2]	coal, sand, cement and other mine products	lumber and plywood	pulpwood	other forest products

[1] Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500, 000 or over. Includes operation United States railways operating in Canada but excludes operations of Canadian railways in the United States. [2] Monthly averages for 1968 and 1969 may di from the averages of the monthly data due to revisions which cannot be allocated by months. [3] Includes traffic interchanged between Canadian railways. **Sourc Railway Operating Statistics (52-003) monthly, and (52-206) annual, D.B.S.**

[1] Prior to 1970, figures included the operations of scheduled and non-scheduled carriers in financial reporting groups I-IV. Figures for 1970 include only the perations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, acific Western Airlines, Quebecair and Trans-air) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commer- ial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage. Note: Nordair was put into Financial Level II (from III) in anuary 1970 i.e. 1969 and previous dates d onot include Nordair. **Source: Civil Aviation (51-001), D. B. S.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averges of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and divided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Total of foreign funds, short term foreign investments and other reign currency assets less foreign currency liabilities. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less an one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of sue. [10] Including loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

---

[1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontar Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements m under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commerc Failures (61-002) Quarterly, D. B. S.**

Note: The monthly data do not add to the annual totals which include supplementary payments arising from the closing of the accounts. [1] This statemen does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loan advances and investments. [2] For comparison purposes, annual figures for 1968-69 and 1969-70 represent "Grants to Universities—Payments to the Association Universities and Colleges of Canada" (col. 6), "Capital Subsidies for the Construction of Commercial and Fishing Vessels" (Col. 8) and "Interim Payments to Ra ways to Maintain Freight Rates at Reduced Levels" (Col. 22). [3] As of April 1, 1969 Industry and Trade and Commerce are combined. [4] Under the Technical a Vocational Training Assistance Act. [5] Government contributions under the Hospital Insurance and Diagnostic Services Act. [6] Includes treatment and rehabilitati services. **Sources: Canada Gazette and Dept. of Finance.**

*Data for April is shown only where there is continuity from fiscal 1970-71. This table is currently being revised.

Research, Analysis and Model Building

Recently, DBS has decided to participate with a number of other federal government departments in the construction of a medium term simulation model of the Canadian economy. While model building activity is not new to DBS, two features of this project make it stand out. One is the cooperation with policy oriented departments in constructing a tool specifically designed to assist in the preparation of policy decisions.

The second feature of this project is its scope. While final decisions have not been reached, tentative plans would include the following features: highly disaggregated production relationships; detailed functions describing the generation of incomes and expenditures; models of price change; and demographic factors. The model would also simulate manpower requirements and would, eventually, provide results on a regional basis.

This activity would have important consequences for the direction of many research and data development programs of the Bureau. Indeed this is a major reason for participating in the project: that many DBS statistical series would become more directly pertinent to, and would be brought together to investigate, particular classes of economic problems.

This rationale can perhaps be generalized. One of the services that statistical agencies could provide is to catalogue and organize the information they produce according to the classes of problems which that information can serve to analyze. Typically, a number of statistical series would bear on the same problem; when they are classified by class or type of problem, they can be brought together and, if necessary, modified for compatibility and consistency. Furthermore, obvious data gaps are brought to light in this process. Whether the statistical agency then proceeds to participate in analyzing the problem would depend on its comparative advantage over other potential analysts, bearing in mind that the statistical agency is primarily charged with producing statistics and has limited resources at its disposal. At any rate, a problem oriented catalogue of statistical series would in itself be an invaluable analytical contribution.

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.

Series published in this Review are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of the data bank contents may be purchased on magnetic tape or as computer printouts. For additional information, see inside back cover.

Selected Economic Indicators appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the US Bureau of the Census Method II, X-11 version.

The *MCD*, or *Months for Cyclinal Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

11. Government Revenues 111
12. Government Expenditures 111

NOTE TO USERS

Section 4, Tables 1, 2, and 12 to 19 – Employment Indexes

Current data for these tables of Section 4 are not available. It is expected that this information will be contained in an early issue of this publication.

Section 12, Table 6 – Shipping and Canal Traffic

The series Canals, Total Cargo Traffic has been replaced by a new series which covers the St. Lawrence Canals and Welland Canal only. Historical data for the new series from 1946 forward will be available shortly in CANSIM.

STATISTICS CANADA:
NEW NAME FOR A LONG-ESTABLISHED SERVICE

The Dominion Bureau of Statistics this summer is facing a problem usually reserved for blushing brides — how to accustom itself, and its friends, to a new name.

The new Statistics Act (1971), which was proclaimed last May 1, changes the name of Canada's central statistical agency from "Dominion Bureau of Statistics" to "Statistics Canada", and the name of the deputy head from "Dominion Statistician" to "Chief Statistician of Canada".

The name change sounds simple enough, but it involves the re-design of letterheads and envelopes, thousands of internal and external forms and questionnaires, more than a thousand publications and hundreds of miscellaneous items such as truck and building signs.

Recognizing the magnitude and complexity of the task of changing names, the legislators allowed a period of four years in which to accomplish the changeover. Forewarned, however, by the introduction of the new legislation in Parliament last fall, a task force of bureau officials started planning its implementation months ago and it is now expected that most uses of the old name will have ceased in a much shorter period.

One factor which militated against a speedy conversion to the new name was the 1971 Census of Canada. A great deal of the printed material used in the Census operation had already been planned, designed and sent to the printers before the new Statistics Act was introduced in Parliament. This included questionnaires, instruction booklets, manuals, publicity and advertising copy.

Concurrent with the introduction of the new name, a common design approach will be introduced on publication covers. The design utilizes a large square of colour as the focal point. The colour block will be coded according to the various subject matter groups, e.g., Manufacturing, Judicial, to provide a general subject identification for users. The new federal identity logo, increasingly required on all government publications, is included in the design. The logo consists of one bar and the maple leaf of the Canadian flag, followed by the name Statistics Canada.

The name change program will also be supported by information to the press and other publicity activities including a leaflet to as many as possible of the users of statistics and respondents to our surveys advising them of the main changes in the legislation. Very important too in effectuating the change will be the switch over to the new name in the large volume of normal daily contacts a national statistical agency has with respondents, users and the general public.

For convenience of readers, a recent Organization Chart is shown on page 4, and a Telephone Directory corresponding to the chart on page 6.

INDUSTRIAL PRODUCTION (More detail in Section 3, Table 2. 3)

THE SEASONALLY ADJUSTED INDEX OF INDUSTRIAL PRODUCTION INCREASED BY 0.6% TO 174.6 IN MAY FROM 173.6 IN APRIL. BOTH MINING AND MANUFACTURING OUTPUT INCREASED WHILE ELECTRIC POWER, GAS AND WATER UTILITIES REGISTERED THEIR SECOND CONSECUTIVE DECLINE. IN MANUFACTURING, BOTH NON-DURABLES AND DURABLES MANUFACTURING CONTRIBUTED TO THE INCREASE.

		total industrial production (1961=100)	manufacturing (1961=100)			(1961=100)

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of document evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Cens of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancé and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

[1] Excludes profits of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of governm business enterprises and other government investment income. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes arbitary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Beca of the arbitary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional prac tioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts, First Quarter 1971 (Statistics Canada. 13-001).**

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than governm business enterprises. Excludes defence construction and equipment which are defined as current expenditure. [3] Includes capital expenditures by private and gov ment business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to inclu all transfer costs on the sales and purchases of the existing land and buildings. [4] The book value of inventories is deflated to remove the effect of price chan and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this va of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1) [5] See footnote 4, Table 1.1 **Sour National Income and Expenditure Accounts, First Quarter 1971 (Statistics Canada. 13-001).**

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars y the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected y compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in ie implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[1] Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment of insurance. [2] Excludes the refundable tax on corporate cash profits introduced May 1966. Refunding of the tax began in the third quarter 1968. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1.9.**

---

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and etween major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar omparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

[1] A minus sign except for official monetary movements, indicates an outflow of capital from Canada. [2] Includes guaranteed issues. [3] Bank balances and other short-term funds abroad (excluding official reserves). [4] Includes changes in loans and accounts receivable and payable, and also balancing item representing difference between direct measurements of current and capital accounts. [5] Canada's Special Drawing Rights are shown for the first quarter 1970. SDR's were issued January 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement. **Sources for above tables: Annual and Quarterly Estimates of the Canadian Balance of International Payments (67-201 and 67-001), Statistics Canada.**

Table 1: wages and salaries, by province based on the 1960 standard industrial classification (million dollars)

[1] See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7. [2] Canada totals, obtained by summing th seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001), Statistics Canada.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001) Statistics Canada.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries, (72-002), Statistics Canada.**

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. Excludes agriculture, fishing, trapping public administration and defence. **Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.**

[1] See footnote 1 and source in Table 13. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 12. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in th month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. **Source: Employment an Average Weekly Wages and Salaries, (72-002), Statistics Canada.**

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review Indexes for Quebec City and Thunder Bay (1969=100) are released each month in Statistics Canada Daily (Statistics Canada Catalogue No. 11-001). **Source: Prices and Price Indexes (62-002), Statistics Canada.**

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the perio at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Annua figures for inventories and unfilled orders are end of December values. [4] Total manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 2: manufacturing shipments[1] by industry based on the 1960 standard industrial classification (million dollars)

monthly averages or months	total shipments	non-durables	durables	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long ter contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders** Manufacturing Industries (31-001), Statistics Canada.

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue.**

---

[1] Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The disco tinuity is virtually insignificant except perhaps in two classifications. i.e. girls' under size 4 and infants' and "little children's". **Source: Footwear Statistic (33-002), Statistics Canada.**

---

[1] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp producon covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), Statistics Canada; Bulletins f Canadian Pulp and Paper Association and Newsprint Association of Canada.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipmen to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural st fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 19 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. [5] Data on shipments steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry. **Source: Prim Iron and Steel (41-001), Statistics Canada.**

---

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.**

[1] These totals include all generating agencies producing over ten million kilowatt hours per year. [2] These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. [3] Less imports. [4] Total net generation less net exports. **Source: Electric Power Statistics, (57-001), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes cru oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gro new production by field less field flared and waste. [4] By gas utilities, does not include imports. **Sources: Crude Petroleum and Natural Gas Production (26-00 Gas Utilities (55-002), Statistics Canada.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosena and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a omparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are availa on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William - Port Arthur (Thunderbay City). **Source: Building Pern (64-001), Statistics Canada.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the t due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations norm follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and consider change may develop before the completion of the operation. **Source: Building Permits (64-001), Statistics Canada.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage nside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan reas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The re-ainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), Statistics Canada.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They refl average of wages paid to all male farm help regardless of age and skill. Data available for Jan., May and Aug. only. [3] Excl. of NFLD. Western grain prices us in the construction of the Index prior to Aug 1, 1967 are final. From Aug 1, 1967 to date, the western grain prices used in the Index are initial prices only for wh oats and barley. [4] The number of bushels of No. 1 feed barley, or cwt of mixed feed, that equal in value 100 lbs. of Grade B live hog. Effective January 196 equal in value to 100 lbs. of Index 100 live hog. [5] Price of 100 lbs. good steer as a % of the price of 100 lbs. live hog, Grade B, or good lamb. Effective Janu 1969, as a % of the price of 100 lbs. live hog, Index 100. [6] Price of 100 lbs. good steer as a % of the price of 100 lbs. good lamb. [7] Quotations refer to steers weights. [8] Grade "B" hogs. Effective Jan 1969 prices based on Index 100, hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farm (62-004); Farm Wages in Canada (21-002) Occasional; Course Grains Quarterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), Statist Canada and Livestock and Meat Trade Report, Dept. of Agriculture.**

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. roduction is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes king and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. ncludes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** uarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Producon of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

[1] Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly servic credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. See als **Credit Statistics (61-004)**. [2] Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings ar treated jointly beginning in January 1970. [3] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with th financing of retail purchases of consumers' goods and repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for Decembe 1970, the net figure was lower than the gross figure by 13.5 per cent. [4] Starting with January 1970, the sales finance companies component of consumer credit h been changed by the transfer of passenger cars financed for commercial purpose, from consumer goods to commercial goods. [5] Personal cash loans of up to $1,50 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [6] Personal cash loans of over $1,500. usual repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure 16.5 per cent. [7] The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series ar repeated in the unadjusted form. [8] Beginning in January 1971, the Other Personal Cash Loans and Installment financing components do not include interest and oth unearned income finance charges. **Sources: Credit Statistics (61-004), Statistics Canada; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. Agriculture.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculat separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most import are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trad Canada, Exports (65-004), Statistics Canada.**

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machin have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imp (65-007), Statistics Canada.**

Table 1: carloadings of revenue freight on Canadian railways[1] (thousand cars)

[1] Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operation United States railways operating in Canada but excludes operations of Canadian railways in the United States. [2] Monthly averages for 1968 and 1969 may d from the averages of the monthly data due to revisions which cannot be allocated by months. [3] Includes traffic interchanged between Canadian railways. **Sour Railway Operating Statistics (52-003) monthly, and (52-206) annual, Statistics Canada.**

---

[1] Prior to 1970, figures included the operations of scheduled and non-scheduled carriers in financial reporting groups I-IV. Figures for 1970 include only the erations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, cific Western Airlines, Quebecair and Trans-air) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commeril air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage. Note: Nordair was put into Financial Level II (from III) in nuary 1970 i.e. 1969 and previous dates do not include Nordair. **Source: Civil Aviation (51-001), Statistics Canada.**

---

[1] Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates cted from the sales reported by companies operating in Canada representing over 80% of new ordinary and of new group contracts. [2] Total new settled-for ary sales in Canada. [3] 1969 data only are revised. Total sales figure does not include sales for Northwest Territories. [4] Under new or amended contracts.

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Onta Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Comme Failures (61-002) Quarterly, Statistics Canada.**

Note: The monthly data do not add to the annual totals which include supplementary payments arising from the closing of the accounts. [1] This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, advances and investments. [2] For comparison purposes, annual figures for 1968-69 and 1969-70 represent "Grants to Universities—Payments to the Association of Universities and Colleges of Canada" (col. 6), "Capital Subsidies for the Construction of Commercial and Fishing Vessels" (Col. 8) and "Interim Payments to Railways to Maintain Freight Rates at Reduced Levels" (Col. 22). [3] As of April 1, 1969 Industry and Trade and Commerce are combined. [4] Under the Technical and Vocational Training Assistance Act. [5] Government contributions under the Hospital Insurance and Diagnostic Services Act. [6] Includes treatment and rehabilitation services. **Sources: Canada Gazette and Dept. of Finance.**

*Data for April & May are shown only where there is continuity from fiscal 1970-71. This table is currently being revised.

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.

Series published in this Review are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of the data bank contents may be purchased on magnetic tape or as computer printouts. For additional information, see inside back cover.

Selected Economic Indicators appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the US Bureau of the Census Method II, X-11 version.

The *MCD*, or *Months for Cyclinal Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

..	figures not available
...	figures not appropriate or not applicable
–	nil or zero.
†	advance estimates.
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

14. Employment Indexes, by Manufacturing Industry ... 49
15. Average Weekly Wages and Salaries, by Industrial Division ... 49
16. Average Weekly Wages and Salaries, by Manufacturing Industry ... 50
17. Average Weekly Wages and Salaries, by Province ... 50
18. Average Hourly Earnings ... 51
19. Average Weekly Hours ... 52

Section 5. Prices

1. Industry Selling Price Indexes ... 53
2. General Wholesale Price Index ... 56
3. Other Price Indexes ... 56
4. Consumer Price Index ... 57

Section 6. Manufacturing

1. Total Inventories, Shipments, Orders ... 58
2. Manufacturing Shipments, Selected Industries ... 59
3. Manufacturing Inventories, Selected Industries ... 61
4. Manufacturing Shipments and Unfilled Orders by Economic Use Classification ... 63
5. Manufacturing Inventories Owned and Raw Materials by Economic Use Classification ... 64
6. Manufacturing Goods in Process and Finished Products by Economic Use Classification ... 65
7. Tobacco and Beverages ... 66
8. Rubber ... 66
9. Rubber Products ... 67
10. Raw Hides, Skins, Finished Leather ... 67
11. Production of Leather Footwear ... 68
12. Primary Textiles ... 68
13. Production of Sawn Lumber ... 69
14. Pulpwood, Wood Pulp and Newsprint ... 69
15. Primary Iron and Steel ... 70
16. New Motor Vehicles ... 71
17. Refrigerators, Freezers, Washing Machines and Clothes Dryers ... 72
18. Radio and Television Sets ... 72

Section 7. Fuel, Power, Mining

1. Total Electric Power ... 73
2. Electric Power Available, by Province ... 73
3. Coal and Coke ... 74
4. Crude Oil and Natural Gas ... 74
5. Petroleum Products ... 75
6. Metals ... 76
7. Non-metallic Minerals ... 77

Section 8. Construction

1. Building Permits, by Type ... 78
2. Building Permits, by Province ... 78
3. Dwelling Units, Started, All Areas ... 79
4. Dwelling Units, Completed, All Areas ... 79
5. Dwelling Units, Under Construction, All Areas ... 79
6. Dwelling Units Started, Centres 10,000 and Over ... 80
7. Dwelling Units Completed, Centres 10,000 and Over ... 80
8. Domestic Shipments of Building Materials by Canadian Manufacturers ... 81
9. Mortgage Loans, Approvals ... 82

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 3, Table 3.1 — Financial Flow Matrix

The National Income and Expenditure Accounts revisions result in some conceptional and statistical changes to the Financial Flow Accounts. Revised data for the Financial Flow Accounts are not comparable with those of earlier periods which do not reflect these changes. For details of these revisions see National Income and Expenditure Accounts, 1926-68.

A new publication of the historical quarterly series for all sector and category tables, and annual matrices covering the first quarter 1962 onwards, is expected to be released in 1972.

Data for the first quarter 1971 are published in the present issue of the Review. Supplementary tables covering revised first quarter 1970 and annual 1970 appear on pages 116-119 of this issue.

Section 8, Table 8 — Domestic Shipments of Building Materials

This table has been completely restructured.

Introduced with this issue, Table 8 provides information on domestic shipments for a selected list of building materials. The former table containing production and export information for building materials will continue to be updated in the CANSIM data base. Historical series for the new table are being prepared for entry into CANSIM at an early data.

CANSIM BULLETIN

The following two CANSIM reference documents are scheduled for October 1971 release:

. *Summary Reference Index* — Free on request
This index summarizes data available from CANSIM and provides matrix identifiers. Formerly published on a quarterly basis, the index will henceforth be released annually with monthly or quarterly amendments as required.

. *Series Directory* — $10.00 per copy or $15.00 with amendment service
This directory provides descriptive detail for series in each matrix, including the first data available.

Inquiries should be directed to the

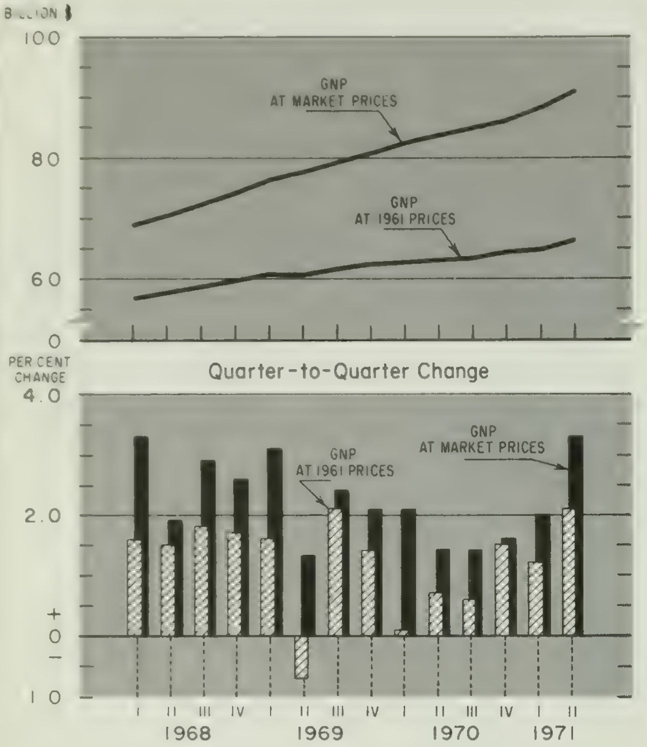
General Time Series Staff,
Statistics Canada
Ottawa, Ontario
K1H 0Z8

ecent publication of interest: *Industrial Corporations — Financial Statistics,* Catalogue 61-003, Quarterly.

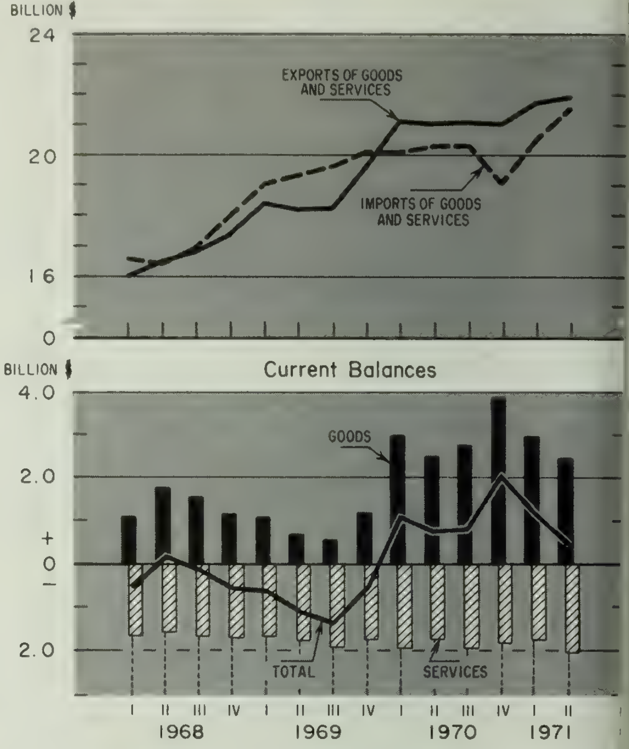
Beginning with the first quarter 1971, this publication was expanded to include for each industry an additional two pages of lected seasonally adjusted data and two pages of financial analysis based on raw and seasonally adjusted data. The financial alysis includes for each industry: Liquidity analysis, cash flow analysis, profitability analysis, rate of return on invested capital d various other financial ratios and percentages.

Further information may be obtained from Business Finance Division, Statistics Canada, telephone 613-994-9622.

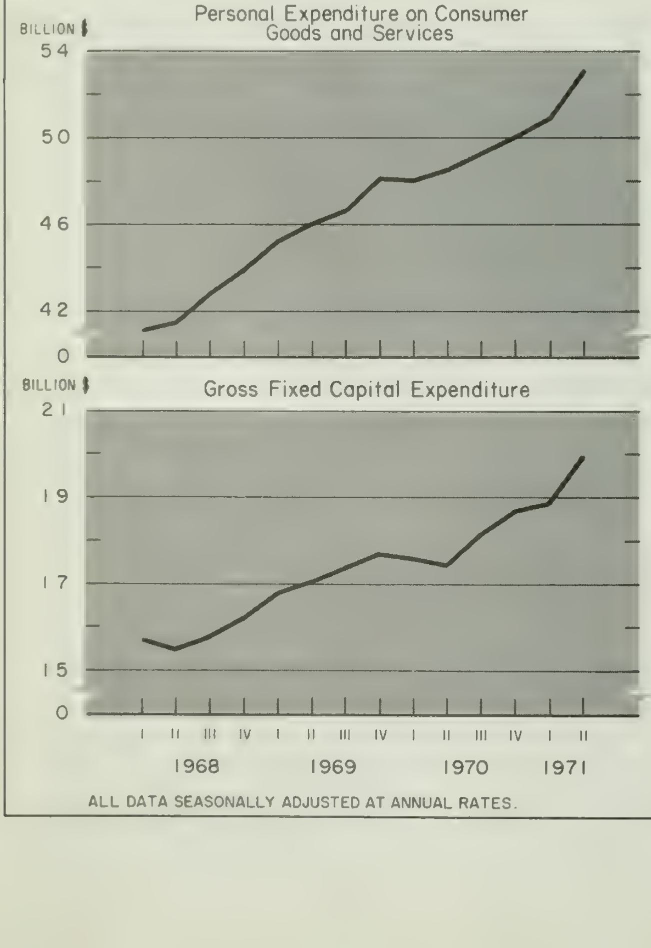
GNP at market prices rose 3.3 per cent, real GNP 2.1 per cent...



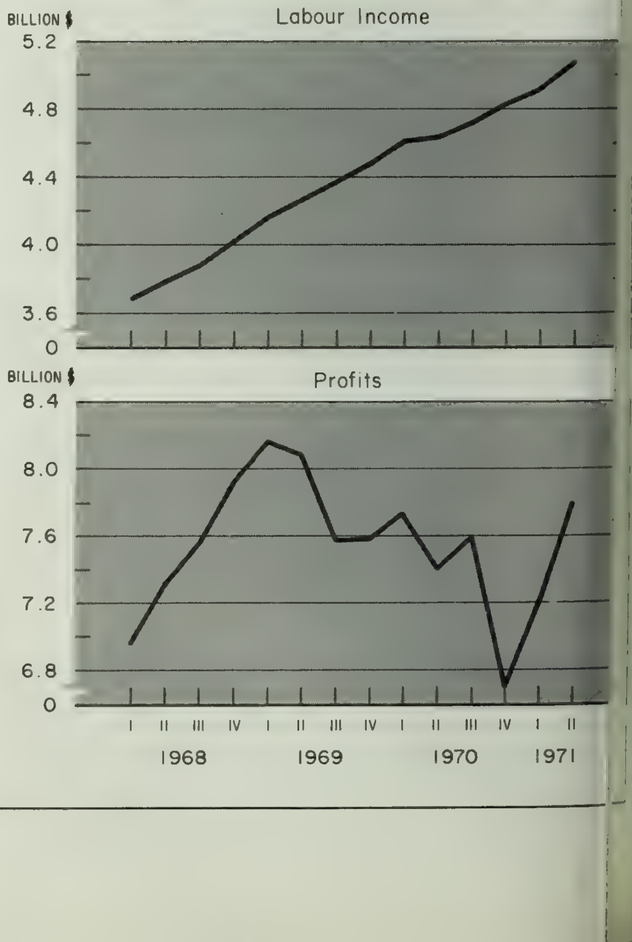
... despite the smallest of the six consecutive surpluses with non-residents recorded since th beginning of 1970...



...and reflecting a strong resurgence of both consumer goods and services and fixed capital expenditures...



... along with higher labour income and profits.



ALL DATA SEASONALLY ADJUSTED AT ANNUAL RATES.

NATIONAL INCOME AND EXPENDITURE ACCOUNTS, SECOND QUARTER, 1971

Preliminary estimates of the National Income and Expenditure Accounts indicate a quarterly gain in GNP during the spring of 1971 which is among the best experienced in recent years. Though the sharp acceleration in economic activity was mostly due to a remarkable upsurge in the sales of a wide range of consumer goods, capital spending on both housing and plant and equipment also rose strongly. However, possibly in part because of the taking up of slack in the economy, the fast pace of growth was not accompanied by an improvement in the rate of unemployment – seasonally adjusted it stood at 6.5 per cent during the second quarter compared with 6.2 per cent in the first quarter.

The aggregate market value of Canada's production of goods and services rose by 3.3 per cent, or by almost $3 billion, to reach a level of $91 billion, seasonally adjusted at annual rates. A percentage increase in GNP of similar magnitude was last experienced in the first quarter of 1969. The second quarter increase confirms and sharply accentuates the accelerating trend in aggregate demand evidenced in the previous two quarters. Even though the implicit price deflator showed an acceleration in the second quarter, as did most price measures, deflated GNP, that is its value measured in 1961 prices, rose by a very sizable 2.1 per cent.

The results obtained so far this year reveal a marked improvement in production over most of 1970. The second quarter real gain of 2.1 per cent was much larger than any gain in 1970. Also, the first quarter original estimate of real growth of 0.6 per cent has now been raised to one of 1.2 per cent. This doubling of the first quarter real growth rate resulted from a 0.2 per cent upward revision in current dollar GNP estimate and from substantial downward revisions in implicit price indexes for exports and for gross fixed capital formation which had the effect of lowering the movement of the overall implicit deflator by 0.4 percentage points, from an estimated price increase of 1.1 per cent down to one of 0.7 per cent. It thus appears that in real terms GNP has grown at an average quarterly rate of 1.7 per cent during the first half of 1971. This compares with a quarterly rate of real growth of 1.1 per cent during the second half of 1970 and with a quarterly rate of 0.7 per cent from the fourth quarter 1969 to the fourth quarter 1970.

Consumer and Government Demand for Goods and Services

Spending by consumers provided by far the greatest source of strength in the second quarter. While personal expenditure on consumer goods and services account for 58.0 per cent of GNP, they contributed 74.0 per cent of the second quarter increase. Although consumer expenditure had picked up some momentum in recent quarters as compared with the low levels of such expenditure in the first half of 1970, the second quarter rise of 4.3 per cent substantially surpasses earlier increases and is in fact the largest recorded in many years. An interesting feature of this rise was its pervasiveness, as all major categories of spending except services posted unusually large gains. The strength of consumer spending was a reflection of widespread gains in the sales of retail trade, in particular of motor vehicle dealers, of department stores, of clothing and shoe stores and of furniture and appliance stores.

The strong resurgence in consumer buying was most evident in durable goods, which showed a 9.4 per cent rise in expenditure on top of an already substantial 4.3 per cent rise in the first quarter. The value of new car purchases rose by the same rate of 15.0 per cent as in the first quarter – possibly still reflecting some pent-up demand resulting from last winter's automobile strike. Net expenditure on used cars also rose very sharply, by 18.0 per cent. Expenditure on durable goods other than new and used automobiles rose by 3.6 per cent, with the largest gains being shown by expenditure on home appliances and on recreation equipment, which each rose by 7.0 per cent. Among semi-durable goods, which showed a 5.2 per cent increase in expenditure, the most notable gains were made in the outlays on clothing and footwear, up 5.0 per cent, and on such items as household textiles, china and silverware, up 9.0 per cent. The increased spending on non-durable goods of 4.8 per cent was very widespread and accounted for over 40 per cent of the increase in total personal expenditure. A large part of the increase was accounted for by sharply rising prices, especially of foods. In volume terms, purchases of non-durable goods rose by 2.5 per cent. By contrast with the other categories of personal expenditure, the rise in outlays on services of 2.0 per cent was not particularly strong.

Current government expenditure on goods and services rose by 3.3 per cent, or approximately at the same rate as aggregate demand on the country's production. Most of the increase consisted in higher wage payments, particularly at the federal level, where large retroactive payments were made. Government outlays on fixed capital formation rose by 6.1 per cent with virtually all of the increase taking place at the federal and provincial levels.

Capital Formation

Increased investment on all the major types of fixed capital formation was an important contributing factor to the second quarter expansion. Outlays on new housing continued to rise at about the same rate of 4.5 per cent as in the first quarter. In contrast with the previous few quarters, when the value of work put in place on multi-family dwellings exceeded that on single family dwellings, all of the gain in the second quarter was in the latter. The current cyclical upswing in the housing sector, which started in the second half of 1970 has now pushed this type of investment to a level almost 28 per cent above its low point in the second quarter of 1970. Most related indicators point to continued strength in this sector during 1971. In particular, housing starts, which had fallen in the first quarter, rose again significantly in recent months.

After showing practically no change in the previous two quarters, business investment in plant and equipment rose by 6.0 per cent in the second quarter. The strength in outlays appeared fairly balanced as between non-residential construction, up 5.4 per cent, and machinery and equipment, up 6.6 per cent. In non-residential construction the most notable gain was in building construction, but engineering construction other than railways also rose. The increase in machinery and equipment was centered in commercial and passenger vehicles and in farm implements. It may be noted here that the mid-year survey of business investment intentions raised the earlier stated investment intentions for the year as a whole on plant and equipment from a 6 per cent increase to one of close to 9 per cent. In percentage terms, the change in intentions was most marked in machinery and equipment, which now shows an intended investment for the year of 4.5 per cent instead of 2.5 per cent as stated in the earlier survey.

In the face of the gathering strength of final sales, investment in non-farm business inventories did not contribute to demand. The large fourth quarter liquidation of $652 million was not followed by any significant accumulation in either of the first two quarters of 1971 – a small accumulation of $40 million in the first quarter was followed by a marginal depletion in the second quarter. Continued sizable depletions in the manufacturing industries offset inventory investment in retail trade, mostly by motor vehicle dealers, and in wholesale trade. The depletions in manufacturing were very widespread in both durable and non-durable goods. In view of the low levels of current stock-to-shipments and stock-to-sales ratios and of the relatively high number of new and unfilled orders in recent months, an inventory build-up is a potential source of strength in demand.

Transactions with Non-residents

The strong pace of expansion in the second quarter was reflected in a further substantial rise in merchandise imports. They rose by 5.8 per cent, after a 13.5 per cent rise in the first quarter, when the rebound in automotive trade after the fourth quarter automobile strike was a special factor. The buoyancy of import demand so far this year is in sharp contrast with its sluggishness throughout 1970. Though import gains in the second quarter were fairly widespread, imports of fabricated steel materials and of transportation and communication equipment rose most strongly. Merchandise exports rose by 2.0 per cent over their high first quarter level. The most notable gains were made in the exports of automotive products, of lumber and of other building materials.

With merchandise imports rising by substantially more than merchandise exports, the surplus on merchandise transactions (on a national accounts basis) fell by about 500 million dollars, from $2,936 million down to $2,440 million. Largely due to a sharp increase in travel payments, the deficit in the service account rose by $244 million. The net result of decline in the merchandise surplus and of the increase in the service deficit was to lower the overall balance on transactions with non-residents in goods and services from $1,156 million to $416 million.

Incomes

The sharp second quarter gain in production was mirrored on the income side by a sharp acceleration in the rate of increase of labour income and by a continuing sizable recovery in corporation profits. The increase in labour income of 3.2 per cent was the largest recorded since the first quarter of 1969. Wages and salaries in the service-producing industries rose by 3.5 per cent almost twice their first quarter rate of increase, and accounted for about two thirds of the total gain; in the goods-producing industries they rose by 2.8 per cent, compared with 2.2 per cent in the first quarter. The faster growth of wages and salaries in the service-producing industries than in total labour income was mostly due to sharp rises in non-commercial services, particularly education, and in public administration, where large retroactive payments were made. In the goods-producing industries, wages and salaries in construction advanced most markedly.

Preliminary estimates of corporation profits before taxes indicate an increase of about 8 per cent in the second quarter – about the same as in the first quarter. Though industrial detail is not yet available, it seems clear that profits in some industries in trade, particularly motor vehicle dealers, rose sizably. Rising by 16.0 per cent in the first two quarters of 1971, corporation profits have recovered all the ground lost in 1970 and are now only about 4 per cent below their peak level recorded in the first quarter of 1969. (However, the share of corporation profits in GNP is still significantly lower than in years prior to 1970; it is now 8.6 per cent as compared with 10.0 per cent in 1969 and 10.4 per cent in 1968.) Undistributed corporation profits rose by 10 per cent in the first quarter and by 13 per cent in the second quarter.

Personal income grew by 2.8 per cent as compared with 2.2 per cent in the first quarter. In contrast with the first quarter, transfer payments to persons did not contribute on balance to personal income growth in the second quarter. Because of sizable increases in direct taxes there was no acceleration in personal disposable income, which rose at the same rate of 2.3 per cent as in the first quarter. With consumer expenditure on consumer goods and services rising almost twice as fast as personal disposable income, personal saving fell very sharply, as did the saving ratio (personal saving as a proportion of personal disposable income) which was down from 8.1 to 6.3 per cent.

INCOME & EXPENDITURE ACCOUNTS, BALANCE OF INTERNATIONAL PAYMENTS (More detail in Section 3, Tables 1.2 and 4.1)

A REMARKABLE UPSURGE IN CONSUMER OUTLAYS ON GOODS AND SERVICES, UP 4.3 PER CENT, AND A QUICKENED PACE OF SPENDING ON BUSINESS GROSS FIXED CAPITAL FORMATION PUSHED UP THE GROSS NATIONAL PRODUCT IN THE SECOND QUARTER BY ALMOST 3 BILLION DOLLARS, OR 3.3 PER CENT, TO REACH A LEVEL OF 91 BILLION DOLLARS. IN PHYSICAL VOLUME THE GROWTH IN PRODUCTION OF 2.1 PER CENT WAS MUCH LARGER THAN ANY EXPERIENCED SINCE 1969. THE STRONG GAIN IN PRODUCTION WAS REFLECTED ON THE INCOME SIDE BY A SHARP ACCELERATION IN THE RATE OF INCREASE OF LABOUR INCOME AND BY A CONTINUING SIZABLE RECOVERY IN CORPORATION PROFITS.

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of document evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Cen of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small numbe non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fianc and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

[1] Excludes profits of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of governm business enterprises and other government investment income. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes arbitary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Beca of the arbitary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional prac tioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts, Second Quarter 1971 (13-001), Statistics Canada.**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than governm business enterprises. Excludes defence construction and equipment which are defined as current expenditure. [3] Includes capital expenditures by private and gov ment business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to incl all transfer costs on the sales and purchases of the existing land and buildings. [4] The book value of inventories is deflated to remove the effect of price chan and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this va of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1) [5] See footnote 4, Table 1.1 Sour **National Income and Expenditure Accounts, Second Quarter 1971 (13-001), Statistics Canada.**

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment insurance. [2] Excludes the refundable tax on corporate cash profits introduced May 1966. Refunding of the tax began in the third quarter 1968. [3] With-lding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property x rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of ries. **For source see Table 1.9.**

---

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and tween major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar mparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1. 9.**

[1] A minus sign except for official monetary movements, indicates an outflow of capital from Canada. [2] Includes guaranteed issues. [3] Bank balances and ther short-term funds abroad (excluding official reserves). [4] Includes changes in loans and accounts receivable and payable, and also balancing item representing ifference between direct measurements of current and capital accounts. [5] Canada's Special Drawing Rights are shown for the first quarter 1970. SDR's were issued anuary 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement. **Sources for above tables: Annual and Quarterly stimates of the Canadian Balance of International Payments (67-201 and 67-001), Statistics Canada.**

[1] See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7. [2] Canada totals, obtained by summing seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment the Canada and regional data having been carried out independently of each other. **Source: The Labour Force (71-001), Statistics Canada.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such a those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are n shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes als publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

[1] See footnote 1 and source in Table 13. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 12. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

---

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review. Indexes for Quebec City and Thunder Bay (1969=100) are released each month in Statistics Canada Daily (Statistics Canada Catalogue No. 11-001). **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

years and months	shipments[1]	new orders received during month[2]	unfilled orders at end of month[3]	inventory at end of month							ratio of inventories owned to shipments
						all inventory held

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the perio at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Annua figures for inventories and unfilled orders are end of December values. [4] Total manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 2: manufacturing shipments[1] by industry based on the 1960 standard industrial classification (million dollars)

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

[1] Total inventories owned by manufacturers including warehouse stocks.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001) Statistics Canada.

Table 4: estimated value of shipments and unfilled orders in manufacturing industries, by economic use classification, based on the 1960 standard industrial classification (million dollars)

years and months	shipments							unfilled orders at end of month						
	consumer goods		machinery and equipment	construction materials and components	other intermediate goods and supplies	export-based industries	supplementary classification: automotive products	consumer goods		machinery and equipment	construction materials and components	other intermediate goods and supplies	export-based industries	supplementary classification: automotive products

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue.**

---

[1] Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications. i.e. girls' under size 4 and infants' and "little children's". **Source: Footwear Statistics, (33-002), Statistics Canada.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural stee fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 196 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. [5] Data on shipments o steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry. **Source: Primar Iron and Steel (41-001), Statistics Canada.**

---

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes cru oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gro new production by field less field flared and waste. [4] By gas utilities, does not include imports. **Sources: Crude Petroleum and Natural Gas Production (26-006 Gas Utilities (55-002), Statistics Canada.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery roduction (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane comingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove il, kerosena and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a omparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specials, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are availab on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, t number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William - Port Arthur (Thunderbay City). **Source: Building Perm (64-001), Statistics Canada.**

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the tab due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations norma follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considera change may develop before the completion of the operation. **Source: Building Permits (64-001), Statistics Canada.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage nside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan reas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), Statistics Canada.**

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes aking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. ncludes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of produc-on will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** uarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Produc-on of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all oth stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Sourc Retail Trade (63-005), Statistics Canada.**

[1] Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly serv credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. See a **Credit Statistics (61-004)**. [2]Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings treated jointly beginning in January 1970. [3]Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with financing of retail purchases of consumers' goods and repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for Decem 1970, the net figure was lower than the gross figure by 13.5 per cent. [4]Starting with January 1970, the sales finance companies component of consumer credit been changed by the transfer of passenger cars financed for commercial purpose, from consumer goods to commercial goods. [5]Personal cash loans of up to $1,5 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [6]Personal cash loans of over $1,500. usu repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure 16.5 per cent. [7] The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series repeated in the unadjusted form. [8] Beginning in January 1971, the Other Personal Cash Loans and Installment financing components do not include interest and ot unearned income finance charges. **Sources: Credit Statistics (61-004), Statistics Canada; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept Agriculture.**

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calcul separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most impo are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trac** Canada, Exports (65-004), Statistics Canada.

Table 4: merchandise imports, by commodity, based on the standard commodity classification[1] (million dollars)

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machin have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Impo (65-007), Statistics Canada.**

[1] Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500, 000 or over. Includes operation United States railways operating in Canada but excludes operations of Canadian railways in the United States. [2] Monthly averages for 1968 and 1969 may d from the averages of the monthly data due to revisions which cannot be allocated by months. [3] Includes traffic interchanged between Canadian railways. **Sour Railway Operating Statistics (52-003) monthly, and (52-206) annual, Statistics Canada.**

[1] Prior to 1970, figures included the operations of scheduled and non-scheduled carriers in financial reporting groups I-IV. Figures for 1970 include only the o ations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, P ific Western Airlines, Quebecair and Trans-air) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commerc air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage. Note: Nordair was put into Financial Level II (from III) in J ary 1970 i.e. 1969 and previous dates do not include Nordair. **Source: Civil Aviation (51-001), Statistics Canada.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are aver- s of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and ivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Total of foreign funds, short term foreign investments and other ign currency assets less foreign currency liabilities. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less n one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of ue. [10] Including loans to instalment finance companies. **Source: Statistical Summary, Bank of Canada.**

[1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and doe include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ont Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Comm Failures (61-002) Quarterly, Statistics Canada.**

Note: The monthly data do not add to the annual totals which include supplementary payments arising from the closing of the accounts. [1]This state nt does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in l s, advances and investments. [2]For comparison purposes, annual figures for 1968-69 and 1969-70 represent "Grants to Universities—Payments to the Associat o Universities and Colleges of Canada" (col. 6), "Capital Subsidies for the Construction of Commercial and Fishing Vessels" (Col. 8) and "Interim Payments to il-ways to Maintain Freight Rates at Reduced Levels" (Col. 22). [3]As of April 1, 1969 Industry and Trade and Commerce are combined. [4]Under the Technica nd Vocational Training Assistance Act. [5]Government contributions under the Hospital Insurance and Diagnostic Services Act. [6]Includes treatment and rehabili ion services. **Sources: Canada Gazette and Dept. of Finance.**

ontinued from page 6

rice Movements

The implicit price index for GNP rose by 1.2 er cent in the quarter, a more rapid pace than dislayed in the previous four quarters. All major comonents showed sizable advances, except the imlicit price index for exports which showed ractically no change over the revised first quarter evel.

In personal expenditure, the pattern of declinng food prices, established since mid-1970 was harply reversed in this quarter. Food prices rose ver 3 per cent contributing the main impetus behind he overall 1.3 per cent increase in the implicit rice index for personal expenditure. Other non-lurable price indexes advanced at much lower rates han the food component. The durable goods index ose a moderate 0.5 per cent, due to an increase in uto prices, as most other components showed offsetting movement, but generally little price change. Prices of clothing and footwear were responsible or the 0.9 per cent increase in the implicit price ndex for semi-durables. Upward movements occurred n almost all service components.

The implicit price index for business gross fixed capital formation climbed 1.1 per cent, up from the revised 0.8 per cent of the first quarter. The acceleration was due to sharp rises in the non-residential construction and in the machinery and equipment components, which rose by 1.8 and 1.1 per cent respectively. The rise in the non-residential component was largely attributable to a very sharp rise in the price of labour in engineering construction (other than highways and railways), but materials prices also rose sharply. In residential construction, the rise of 0.6 per cent was mostly due to increasing materials prices. Very notable accelerations in the prices of lumber and of steel were major factors in the increases in materials prices in both residential and non-residential construction.

After showing a fall of 0.9 per cent in the first quarter, the implicit price index for exports levelled in the second quarter. (It may be noted that the implicit price index for exports was revised downward for the first quarter; the original estimate showed a 0.2 per cent rise.) The implicit price index for imports, on the other hand, showed a marked acceleration, from a 0.4 per cent increase in the first quarter to a 1.2 per cent increase in the second quarter.

Selected Implicit Price Indexes – Seasonally Adjusted[1]

Percentage change from the previous quarter

	1970				1971

Gross National Expenditure	2.0	0.6	0.8	0.1	0.7	1.2
Gross National Expenditure excluding value of physical change in inventories	1.4	0.8	0.8	0.4	0.7	1.0

[1] Implicit price indexes are currently weighted (Paasche) and therefore reflect changes in expenditure patterns as well as price changes of individual items.

The Government Sector

Seasonally adjusted at annual rates, total expenditure of all levels of government combined (excluding inter-governmental transfers) rose by almost 2 per cent in the quarter. The major factor in the increase was higher outlays on goods and services. Current spending rose by over 3 per cent and was associated with higher wage payments, particularly at the federal level where a large retroactive payment was made. The gain in capital spending—over 6.5 per cent—took place at the federal and provincial levels.

Transfer payments to persons remained unchanged in the quarter. Higher federal transfers were due mainly to higher Old Age Security payments, resulting from the legislation change introduced at the beginning of April, and unemployment insurance benefits, but these were offset by a sharp decline in provincial transfers to post-secondary educational institutions. Movements in the other expenditure categories were minor and largely offsetting.

The increase in total revenues of all levels of government combined was greater than that in total expenditures—over 4 per cent, with the largest portion accounted for by higher returns from direct taxation. As a result, the surplus, on a national accounts basis, of the government sector as a whole more than doubled during the quarter, moving from a rate of $520 million in the first quarter to a rate of $1,296 million. Most of the change occurred at the federal level, which moved from a deficit of $1,092 million to a deficit of $520 million, part of the change reflecting a sharp decline in transfers to provincial governments from the irregularly high first quarter rate. At the provincial level, this, coupled with a sharp increase in transfers to local governments, resulted in little change in the provincial surplus. The surplus of the Canada and and Quebec Pension Plans rose during the quarter.

Trucking Origin and Destination, Preliminary 1970 National Estimates

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, nº du catalogue 11-003F.

Series published in this Review are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of the data bank contents may be purchased on magnetic tape or as computer print-outs. For additional information, see inside back cover.

Selected Economic Indicators appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the US Bureau of the Census Method II, X-11 version.

The *MCD*, or *Months for Cyclical Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

11. Government Revenues 111
12. Government Expenditures 111

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in oncept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

ection 3, Table 3.1 – Financial Flows Matrix

Supplementary Financial Flows matrices (first quarter 1971 and 1970 and annual 1970) were published in the September 1971 ssue of this publication.

ection 3, Tables 4.1 - 4.3 – Balance of International Payments

These tables, as is usual in the second quarter of each year, contain revisions to the data for the previous two years.

ection 6, Table 10 – Raw Hides, Skins and Finished Leather

The "goat skins" column of this table has been deleted because data have become confidential.

ection 10, Table 2 – Department Store Sales and Stocks

The July 1971 issue of the source publication for this table "Department Store Sales and Stocks", Catalogue 63 - 002, contains he following information of interest:

– a listing of department store firms, all or some of whose stores meet Statistics Canada definition;
– the commodity reference list which describes in detail the commodities comprising each of the 40 department stores.

ection 10, Table 6 – Consumer Credit

Revisions to this table include final 1970 and revised 1971 figures for sales finance and consumer loan companies.

ection 12, Table 5 – Operating Statistics of Canadian Pipelines

The series "operating revenues" of natural gas carriers has been dropped because data are not longer collected.

CANSIM – *Series Directory* (October 1971) – $10.00 per copy or $15.00 with amendment service.

Construction Price Indexes for Hydro-Electric Stations, 1961 - 1970 (catalogue 62 - 533 and *Prices and Price Indexes, June 1971* catalogue 62 - 002).

For further information, see inside page cover of this review.

CURRENT ECONOMIC STATISTICS

It is too early to tell from the available statistics whether the renewed fast pace of economic activity evidenced by the unusually sharp second quarter advance in Gross National Product at market prices of 3.3 per cent, seasonally adjusted at annual rates, has been maintained in the third quarter. Merchandise exports, housing starts, and retail sales point to continued strength in demand. However, on the supply side, the index of real domestic product at factor cost posted a decline in July. Employment has been on a rising trend since April but, because of a similar growth in the labour force, the unemployment rate remained high – 6.5 per cent in August. There has also been some evidence of acceleration in the rate of increase of a number of price indexes in recent months. The eventual impact on Canada's exports and employment of the 10 per cent surcharge on dutiable imports announced by the United States Government at the end of August is the center of considerable concern.

The index of real domestic product at factor cost, showed a 0.3 per cent decline in July, on a seasonally adjusted basis. This modest set-back, the first experienced since February, occurred in the service-producing industries and was largely attributable to a 3.3 per cent fall in the trade index. The production index for the goods-producing industries rose in July, mainly because of increases in the indexes for agriculture and for public utilities; the manufacturing index continued along its flat trend of recent months, and most other components declined, notably the indexes for construction (due to the non-residential portion) and for mining. None of the related indicators of manufacturing activity such as shipments, new and unfilled orders, and inventories displayed significant movements in July. The inventories to shipments ratio, at 1.97, remained low.

Increased consumer spending has been the major stimulus to production in recent months. The unusually large rise in consumer expenditure during the second quarter was almost entirely concentrated in the month of April, when the seasonally adjusted value of retail sales rose by 4.7 per cent. After levelling out in May and rising by a modest 0.3 per cent in June, retail sales regained momentum in July, with a 0.8 per cent rise. The most notable increase occurred in the value of sales by furniture, T.V., and appliance stores, which rose by 7.1 per cent. On the other hand, the value of sales by department stores, which had risen sizably in April and May, declined for a second consecutive month in July. The value of sales by motor vehicle dealers also declined in July, by 1.0 per cent.

Statistics relating to fixed capital formation in the third quarter are scanty, except for housing, where starts, completions and units under construction have all been running at high levels in July and August. Seasonally adjusted at annual rates, starts on new dwelling units in centers with a population of more than 10,000 rose by 5.7 per cent in July and by a further 3.9 per cent in August, bringing their level to 191,900 units. Very little is known as yet on third quarter developments in business investment on non-residential structures and on machinery and equipment. The relatively low levels of the value of non-residential building permits in April and May indicate a possible slowdown in this type of investment in the third quarter. However, building permits have since been on a rising trend, pointing to the likelihood of increased outlays later in the year. Though available information is too fragmentary to infer business outlays on machinery and equipment, it may be noted that domestic shipments of such goods rose sizably in July.

In the external trade sector of the economy, both merchandise exports and imports (seasonally adjusted) declined in July and rebounded strongly in August. Though merchandise exports fell by 6.0 per cent in July, they increased by a spectacular 9.9 per cent in August to reach a new record level of 1,601 million dollars. The bulk of this large gain consisted of shipments to countries other than the United States. Merchandise imports in these two months displayed movements of smaller magnitude than exports, a July decline of 1.7 per cent being followed by an increase of 5.1 per cent in August. The balance of merchandise trade (on a Trade of Canada basis) declined from a surplus of 206 million dollars in June to one of 136 million dollars in July, then rebounded in August to a surplus of 212 million dollars. The August increase was entirely due to transactions with overseas countries, as the merchandise surplus with the United States continued to decline.

The pick-up in economic activity in the second quarter was not accompanied by a reduction in the seasonally adjusted rate of unemployment, as employment increases roughly kept pace with the growth in the labour force. Parallel movements in employment and labour force were again displayed in the first two months of the third quarter, and there was consequently little change in the rate of unemployment, which was 6.3 per cent in July and 6.5 per cent in August, compared with an average rate of 6.5 per cent in the second quarter. Employment increased markedly in July, by 0.8 per cent, but showed practically no change in August. The increase in employment from June to August was much larger in the age group 14 to 24 than in that for persons aged 25 years and over. However, the expansion in the labour force was also most notable in the younger age group, where it exceeded the gains in employment.

The tendency towards some acceleration in price trends appears to continue in the third quarter. The consumer price index rose by 0.8 per cent in July and by 0.7 per cent in August. In August the index stood 3.4 per cent above its level in the

TECHNICAL NOTE

MONTHLY INDEXES OF CANADIAN MACHINERY AND EQUIPMENT, 1968 = 100

Introduction

Table 2 page 115 contains the newly released monthly series, *Price Indexes of Construction Machinery and Equipment*. The composite index is provided from 1961 forward; component indexes for Canadian manufactured commodities and for equipment imported from the United States are provided from 1968. This series is the first release in a planned series of price indexes relating to capital expenditures for machinery and equipment in Canada. This and all subsequently released indexes will be published monthly in *Prices and Price Indexes*.

Acknowledgements

The Prices Division acknowledges the co-operation of manufacturers and distributors who provide the price data and who have given generously of their time to ensure that the statisticians gained the necessary insight into the intricacies of the industry. Also acknowledged is the assistance provided by the Construction Machinery and Equipment Distributors Association and the United States Bureau of Labour Statistics.

The Conceptual Framework of the Indexes and Index Uses

The main statistical need is for a set of price indexes relating to gross annual capital expenditures on machinery and equipment by construction contractors. Such indexes are required as deflators for constant dollar estimates of national income and expenditures, and for estimating the real growth of capital stock. Users include government agencies, universities and business organizations. Commodity detail serves such uses as comparison of the price movements of commodities at different stages of manufacture or of domestically produced and imported equipment.

Investment in capital equipment by the construction industry accounted for about 4% of total investment in machinery and equipment in 1968. Investment by all users in construction-type equipment amounted to about 9% of all gross investment in machinery and equipment in that year. In preparing the indexes, little difficulty was encountered in determining the appropriate commodities for which to collect prices. However, no survey results were available to provide detailed empirical information of purchases of capital equipment by the construction industry. In the absence of specifically appropriate data, Census of Merchandising surveys of sales by distributors and Canadian manufacturers to Canadian purchasers of construction-type equipment in 1967 and 1969 were utilized to obtain the weights, which are ratios expressing the relative importance of the commodities selected for pricing.

Further, because of the need to obtain detailed information from manufacturers when changes in specifications occur, prices are obtained primarily from manufacturers even though purchaser's price indexes are required. Hence, the index is a manufacturers' selling price index relating to the purchases in the domestic market of imported and domestically produced construction-type equipment. To more closely approximate a purchase price index, manufacturers' selling prices have been adjusted as necessary for duty, exchange and Federal Sales Tax.

Characteristics of Prices Used in the Index

Price indexes have been prepared for all major types of construction equipment, which number about 15, and prices collected from both Canada and the United States. These collections are supplemented by a few reports from off-shore producers which have not as yet, however, been included in index calculations.

Most price reports are submitted by manufacturers although a few distributors also provide prices. All major manufacturers are included in the price sample. Respondents are asked to report transaction prices, f.o.b. plant.

Where the United States Bureau of Labour Statistics publishes manufacturers' selling price indexes for commodities appropriate to Canadian imports of construction equipment, Bureau of Labour Statistics indexes have been incorporated into the indexes.

Prices or indexes relating to the U.S.-made machines have been adjusted for duty by applying rates supplied by the Department of National Revenue.

Federal sales tax adjustments also have been made to both the BLS and Canadian price data. A rate of 11% prevailed from January 1, 1961 to December 31, 1966 and a rate of 12% has been applied from January 1, 1967 to date (15/6/71).

Prices received from manufacturers and distributors are reviewed for consistency. When models change, estimates of the effect on the reported price are made to prevent the discontinuity from influencing the movement of the price index. This is accomplished by evaluating the unit cost of the changes which occur. If both old and new models are on the market simultaneously, under similar market conditions, the differential between the price of the two models can be utilized. If both models are not on the market simultaneously, manufacturers are approached to provide estimates of changes in costs of new and old models so that the influence of the changed components can be removed from the reported price.

Further descriptions of the methods used to collect and to evaluate the quality changes of manufacturers' selling prices can be found in the reference paper *Industry Selling Price Index* (1961 = 100) Statistics Canada Catalogue 62-528. Description of the commodities priced, and the index weights are given in Table 1, page 114.

Note: Trucking Origin and Destination Survey

Preliminary 1970, National Estimates

The Trucking Origin and Destination Survey is a new survey undertaken to measure the regional and inter-regional movement of commodities transported by common and contract motor carriers in Canada. The survey was conducted in two parts. This note deals with the first part and presents national aggregates of tonnages transported and revenues earned by five major economic regions in Canada. The second part will provide national ton mile estimates as well, including more detailed breakdowns of commodity flows by region.

This survey, the first of its kind ever conducted in this country, was based on a random sample of motor carriers' shipping documents. The universe of licensed motor carriers was divided into 60 revenue groups by type (common or contract, household goods) and region of operation. Firms were randomly chosen to represent each group. Statistics Canada, through its regional offices, sampled the shipping documents of each of these firms to obtain information on the commodities carried: the origin and destination of shipments, the weights, rates and revenues charged. This information is being tabulated and expanded to represent the total for-hire trucking industry in the country. The preliminary estimates in the table below are based on a sample of 143 firms involving some 30,000 documents. The full survey will cover 563 firms and will involve 150,000 documents.

The survey was conducted with the assistance and support of the trucking industry through its regional and provincial associations as well as the national organization, the Canadian Trucking Association.

For the purposes of this survey, origin is defined as the place where the shipment commenced by truck and destination refers to the place where the shipment terminated by truck. Points at which shipments were interlined between motor carriers (transferred from one carrier to another) are not considered origins or destinations.

Excluded from the survey are: local traffic, e.g., pick-up and delivery; international traffic, un-licensed and own-account (private) trucking; and trucking operations carried on as an integral part of another transport service. "Piggyback" movements, however, are included.

Shown in the table below are (1) estimates of revenues earned in 1970 from the transportation of all commodities by origin and destination for five economic regions in Canada and (2) the tonnages associated with these revenues.

The estimates in this table are subject to sampling variability and should be treated as approximate rather than precise measures. The more precise final estimates, when available, will be published together with their associated coefficients of variation.

SELECTED ECONOMIC INDICATORS–SEASONALLY ADJUSTED

INDUSTRIAL PRODUCTION (More detail in Section 3, Table 2.3)

THE SEASONALLY ADJUSTED INDEX OF INDUSTRIAL PRODUCTION DECREASED BY 0.1% IN JULY TO A LEVEL OF 175.6 FROM 175.7 IN JUNE. BOTH MINING AND MANUFACTURING CONTRIBUTED TO THE DECLINE, WHILE UTILITIES INCREASED. IN MANUFACTURING, NON-DURABLE GOODS OUTPUT FELL, WHILE THE PRODUCTION OF DURABLE GOODS REMAINED UNCHANGED.

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documer evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Ce of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small numb non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fian and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

[1] Excludes profits of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of governme business enterprises and other government investment income. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes arbitary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Becau of the arbitary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional prac tioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts, Second Quarter 1971 (13-001), Statistics Canada.**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than governm business enterprises. Excludes defence construction and equipment which are defined as current expenditure. [3] Includes capital expenditures by private and gov ment business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to inclu all transfer costs on the sales and purchases of the existing land and buildings. [4] The book value of inventories is deflated to remove the effect of price chan and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between this va of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1) [5] See footnote 4, Table 1.1 **Sourc National Income and Expenditure Accounts, Second Quarter 1971 (13-001), Statistics Canada.**

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in e implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment insurance. [2] Excludes the refundable tax on corporate cash profits introduced May 1966. Refunding of the tax began in the third quarter 1968. [3] Withlding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of ries. **For source see Table 1.9.**

---

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and tween major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar mparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

[1] A minus sign except for official monetary movements, indicates an outflow of capital from Canada. [2] Includes guaranteed issues. [3] Bank balances and ther short-term funds abroad (excluding official reserves). [4] Includes changes in loans and accounts receivable and payable, and also balancing item representing ifference between recorded measurements of current and capital accounts. [5] Canada's Special Drawing Rights are shown from the first quarter 1970. SDR's were ssued January 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement. **Sources for above tables: Annual and Quarterly stimates of the Canadian Balance of International Payments (67-201 and 67-001), Statistics Canada.**

[1] See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7. [2] Canada totals, obtained by summing seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustmen the Canada and regional data having been carried out independently of each other. **Source: The Labour Force (71-001), Statistics Canada.**

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The es timates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] Canad totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences resul from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force (71-001 Statistics Canada.**

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such a those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are n shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes al publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.**

[1] See footnote 1 and source in Table 13. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 12. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included n non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in th month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products, knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. **Source: Employment an Average Weekly Wages and Salaries (72-002), Statistics Canada.**

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per ent, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. They annot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 969 issue of the Canadian statistical review. Indexes for Quebec City and Thunder Bay (1969=100) are released each month in Statistics Canada Daily (Statistics anada Catalogue No. 11-001). **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

years and months	shipments[1]	new orders received during month[2]	unfilled orders at end of month[3]	inventory at end of month						
				owned[4]	held but not owned	all inventory held				ratio of inventories owned to shipments
						total	raw materials	goods in process	finished products

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-te contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the per at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Ann figures for inventories and unfilled orders are end of December values. [4] Total manufacturing inventory owned by manufacturers including warehouse stocks. **Sourc** **Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long ter contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders Manufacturing Industries (31-001), Statistics Canada.**

Table 3: manufacturing inventories[1] by industry based on the 1960 standard industrial classification (million dollars)

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intende for cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' store and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue**

---

[1] Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications. i.e. girls' under size 4 and infants' and "little children's". **Source: Footwear Statistics (33-002), Statistics Canada.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipmen to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural ste fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 19 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. [5] Data on shipments steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry. **Source: Prim Iron and Steel (41-001), Statistics Canada.**

---

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes cru oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gro new production by field less field flared and waste. [4] By gas utilities. **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilit (55-002), Statistics Canada.**

Table 5: statistics of refined petroleum products[1] (thousand barrels)

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialies, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are availa on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William - Port Arthur (Thunderbay City). **Source: Building Perr (64-001), Statistics Canada.**

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the to due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations norm follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and consider change may develop before the completion of the operation. **Source: Building Permits (64-001), Statistics Canada.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), Statistics Canada.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are sed on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total lue of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above le covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. en though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), atistics Canada.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They refle average of wages paid to all male farm help regardless of age and skill. Data available for Jan., May and Aug. only. [3] Excl. of NFLD. Western grain prices us in the construction of the Index prior to Aug 1, 1967 are final. From Aug 1, 1967 to date, the western grain prices used in the Index are initial prices only for whe oats and barley. [4] The number of bushels of No. 1 feed barley, or cwt of mixed feed, that equal in value 100 lbs. of Grade B live hog. Effective January 196 equal in value to 100 lbs. of Index 100 live hog. [5] Price of 100 lbs. good steer as a % of the price of 100 lbs. live hog, Grade B, or good lamb. Effective Janu 1967, as a % of the price of 100 lbs. live hog, Index 100. [6] Price of 100 lbs. good steer as a % of the price of 100 lbs. good lamb. [7] Quotations refer to steers weights. [8] Grade "B" hogs. Effective Jan 1969 prices based on Index 100, hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farme (62-004); Farm Wages in Canada (21-002) Occasional; Course Grains Quarterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), Statisti Canada and Livestock and Meat Trade Report, Dept. of Agriculture.**

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes aking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all ot stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Sour** **Retail Trade (63-005), Statistics Canada.**

[1] Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly ser credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. See **Credit Statistics (61-004).** [2] Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings treated jointly beginning in January 1970. [3] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with financing of retail purchases of consumers' goods and repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for Decem 1970, the net figure was lower than the gross figure by 13.5 per cent. [4] Starting with January 1970, the sales finance companies component of consumer credit been changed by the transfer of passenger cars financed for commercial purpose, from consumer goods to commercial goods. [5] Personal cash loans of up to $1, made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [6] Personal cash loans of over $1,500. usu repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figur 16.5 per cent. [7] The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series repeated in the unadjusted form. [8] Beginning in January 1971, the Other Personal Cash Loans and Installment financing components do not include interest and o unearned income finance charges. **Sources: Credit Statistics (61-004), Statistics Canada; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dep Agriculture.**

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculate separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most importa are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade Canada, Exports (65-004), Statistics Canada.**

Table 4: merchandise imports, by commodity, based on the standard commodity classification[1] (million dollars)

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machi have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Imp** (65-007), Statistics Canada.

Table 1: carloadings of revenue freight on Canadian railways[1] (thousand cars)

ears nd onths	total railway revenue freight loadings (carload and non-carload) (000 tons)	total revenue cars loaded (carload only)	farm products and food: wheat	other grain and grain products	fresh fruits and vegetables	other agriculture products	animals and their products	prepared food products	mine products: iron ore and concentrates	other metal ores and concentrates	potash[2]	coal, sand, cement and other mine products	forest products: lumber and plywood	pulpwood	other forest products

[1] Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operation United States railways operating in Canada but excludes operations of Canadian railways in the United States. [2] Monthly averages for 1968 and 1969 may d from the averages of the monthly data due to revisions which cannot be allocated by months. [3] Includes traffic interchanged between Canadian railways. **Sour Railway Operating Statistics (52-003) monthly, and (52-206) annual, Statistics Canada.**

[1] Prior to 1970, figures included the operations of scheduled and non-scheduled carriers in financial reporting groups I-IV. Figures for 1970 include only the perations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, acific Western Airlines, Quebecair and Trans-air) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commer- al air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage. Note: Nordair was put into Financial Level II (from III) in nuary 1970 i.e. 1969 and previous dates do not include Nordair. **Source: Civil Aviation (51-001), Statistics Canada.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are aver- s of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and ivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Total of foreign funds, short term foreign investments and other ign currency assets less foreign currency liabilities. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less h one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of ue. [10] Including loans to instalment finance companies. **Source: Statistical Summary, Bank of Canada.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base als" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks uded in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries cept electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. ---

[1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontar Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements m under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commerc** Failures (61-002) Quarterly, Statistics Canada.

Note: The monthly data do not add to the annual totals which include supplementary payments arising from the closing of the accounts. [1]This statem does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loa advances and investments. [2]For comparison purposes, annual figures for 1968-69 and 1969-70 represent "Grants to Universities—Payments to the Associatio Universities and Colleges of Canada" (col. 6), "Capital Subsidies for the Construction of Commercial and Fishing Vessels" (Col. 8) and "Interim Payments to R ways to Maintain Freight Rates at Reduced Levels" (Col. 22). [3]As of April 1, 1969 Industry and Trade and Commerce are combined. [4]Under the Technical Vocational Training Assistance Act. [5]Government contributions under the Hospital Insurance and Diagnostic Services Act. [6]Includes treatment and rehabilita services. **Sources: Canada Gazette and Dept. of Finance.**

*Data for April to July are shown only where there is continuity from fiscal year 1970-71. **This table is currently being revised.**

(Continued from page 5)

Index Weights

The main sources of empirical data from which commodity weights were derived were the 1967 and 1969 surveys in the Census of Merchandising relating to the sales of Canadian manufacturers' and distributors of construction-type equipment.

These surveys reported sales figures of $448 million and $560 millions for the two years surveyed. It is known that at the total level, sales to the construction industry amount to about half of all sales. The other portion represents sales to logging, mining and quarrying operations and to those engaged in own-account construction.

The survey data were adjusted to remove some elements of equipment relating solely to non-construction operations. The value of repair parts, which is not usually capitalized, was excluded. Commodities representing less than 1% of total sales were also excluded.

The remaining values were apportioned between the Canadian and the non-Canadian price samples on the basis of Statistics Canada surveys of the value of imports and domestic manufacturing, for the years 1967 and 1969.

The relative importance of the above values was then tabulated and the resulting ratios were incorporated into index calculations. These weights are presented in Table 1.

Table 1 does not provide the weights utilized when more than one firm reports a price for a given commodity. The convention utilized by both the Bureau of Labour Statistics and Statistics Canada is to give equal weights to each firm reporting.

Time Base and Formula

The indexes are published to a 1968 = 100 time reference base. This year was chosen because 1968 is the first year for which it is possible to publish the commodity indexes relating to Canadian manufactured machinery and equipment.

The formula used in calculating the base-weighted indexes may be written as follows:

$$I_n = \frac{\Sigma p_n q_o}{\Sigma p_o q_o} \times 100 = \Sigma \frac{p_n}{p_o} \times \left\{ \frac{p_o q_o}{\Sigma p_o q_o} \times 100 \right\} = \Sigma \frac{p_n}{p_o} \times W_o$$

$$\text{where: } W_o = \frac{p_o q_o}{\Sigma p_o q_o} \times 100$$

and

I_n = index for year n

Σ = summation over all items

p_n = price of an item in year n

p_o = price of an item in year o, the base year

$\frac{p_n}{p_o}$ = price in year n, as a ratio of price in year o, (This price ratio is often referred to as a price relative or an index.)

q_o = quantity of a particular item in the weight base period

$p_o q_o$ = value of a particular item in the weight base period

$\Sigma p_o q_o$ = value of all items in the weight base period

$\frac{p_o q_o}{\Sigma p_o q_o} \times 100 = W_o$ = relative value, or weight of an item in the weight base period

TABLE 1. Commodity Sample and Index Weights for the Price Indexes of Construction Machinery and Equipment

Commodity	Index weights			Description of items included in the price sample
	Composite	Canadian produced equipment	Imported equipment	
Excavator/cranes, crawler mounted ...	7.6	2.5	5.1	Cable-operated, convertible excavator cranes, crawler mounted Cable-operated power shovels and hoes, crawler mounted Hydraulic-operated hoes and shovels, crawler mounted
Excavator/cranes, rubber tire mounted	5.5	1.4	4.1	Cable-operated convertible excavator cranes, rubber-tire or truck mounted Hydraulic-operated cranes, rubber-tire or truck mounted Hydraulic-operated hoes and shovels, rubber-tire or truck mounted
Concrete mixers	2.2	1.7	.5	Batch and continuous mixing plants, both stationary and portable (Transit mixers, excluding chassis)
Road graders	6.5	4.8	1.7	Self-propelled motor graders
Pumps	1.6	1.1	.5	Dewatering pumps Diaphram pumps Concrete pumps
Rock drills	2.3	.8	1.5	Hand-held, air leg or other air-operated rock drills Crawler-mounted air-operated drills Mounted rotary drills
Off-highway dump trucks	7.0	2.4	4.6	Rear-dump trucks, over 15 tons capacity Bottom and side-dump haulers
Portable air compressors	2.3	1.7	.6	Portable air compressors, over 100 CFM
Front end loaders (wheeled)	19.5	11.6	7.9	Rubber-tired (integral design) front-end loaders
Asphalt equipment	2.1	1.0	1.1	Batch and continuous asphalt plants Paving and finishing machines
Scrapers	4.2	0.0	4.2	Self-propelled, off-highway dig-carry-haul scrapers
Crawler tractors	30.6	0.0	30.6	Non-farm crawler tractors, bare or equipped as a dozer or as a front-end loader
Aggregate equipment	4.4	2.0	2.4	Portable crushing plants Portable screening plants Portable conveyors Vibrating screens (sold separately)
Attachments	1.1	.6	.5	Backhoes for mounting on tractors Front-end loader attachments Dozer attachment Winches
Other wheeled tractors	3.1	.5	2.6	Industrial tractors, bare or equipped with bucket, backhoe or dozer Wheeled tractor dozers (integral design)
Totals	100.0	32.1	67.9

Current Economic Statistics *(Continued from page 4)*

same month of 1970, thus registering the largest twelve-month increase since May 1970. Very sharp rises in food prices in July and August of around 2 per cent in each month accounted for the acceleration. Accelerated rises in prices were also shown in July and August by a number of industry selling price indexes, especially in the wood products group. Price rises in lumber and lumber products were also reflected in sizable increases in building construction price indexes.

On the financial scene, there was a continued expansion in the money supply and in chartered bank loans outstanding. The increase in loans, mainly unsecured personal loans, contributed to a modest decline in the liquidity of the banks in recent months from the very high levels in the firs half of the year. After declining dramatically i 1970 and early 1971, interest rates have recentl shown a tendency to rise. The yield on 91-da treasury bills at October 7 of 3.98 per cent wa almost one percentage point above its level i April. However, long-term rates, which had als been rising in the second quarter, tended to declin in August and September. The uncertainty prevailin in international financial markets as a result of th announcement on August 15 of new economic measures by the United States Government has not bee reflected in a major change in the exchange valu of the Canadian dollar, in terms of US funds, whic at 99.3 cents on October 6 compared with 98. cents on August 11. Canada has had a freel floating exchange rate since the end of May 1970.

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, n° du catalogue 11-003F.

Series published in this Review are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of the data bank contents may be purchased on magnetic tape or as computer printouts. For additional information, see inside back cover.

Selected Economic Indicators appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the US Bureau of the Census Method II, X-11 version.

The *MCD*, or *Months for Cyclical Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

..	figures not available
...	figures not appropriate or not applicable
–	nil or zero.
†	advance estimates.
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

Section 1. Selected Economic Indicators

1. Labour Force 7
2. Industrial Production 8
3. Employment, Selected Industries 9
4. Income, Earnings and Hours 10
5. Retail Trade, New Motor Vehicle Sales 11
6. Construction 12
7. Exports and Imports 13
8. Selected Monthly Series 14
9. Income and Expenditure Accounts, Balance of International Payments 15
10. Real Domestic Product 16
11. Prices 17

Section 2. Population Statistics

1. Population, by Province 18
2. Immigration to Canada, by Country of Last Permanent Residence 18
3. Immigration to Canada, by Province of (Intended) Destination 18
4. Immigration to Canada, by (Intended) Occupational Group 18
5. Births, by Province 19
6. Deaths, by Province 19
7. Marriages, by Province 19

Section 3. System of National Accounts

1. Income and Expenditure Accounts

1.1. National Income and Gross National Product 20
1.2. Gross National Expenditure, Current Dollars 20
1.3. Gross National Expenditure, Constant Dollars 21
1.4. Sources of Personal Income 21
1.5. Disposition of Personal Income 22
1.6. Sources and Disposition of Gross Saving 22
1.7. Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government 23
1.8. Implicit Price Indexes 27
1.9. Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost 27

2. Domestic Product by Industry

2.1 Real Domestic Product by Industry of Origin, Quarterly 28
2.2 Real Domestic Product by Industry of Origin, Monthly 29
2.3 Industrial Production 31

3. Financial Accounts

3.1. Financial Flows 36, 113

4. Balance of International Payments

4.1. Canadian Balance of International Payments, Current Account, All Countries 38
4.2. Canadian Balance of International Payments, Current Account, Country Distribution 38
4.3. Canadian Balance of International Payments, Capital Account, All Countries 39

Section 4. Labour

1. Wages and Salaries, by Province 40
2. Wages and Salaries, by Industry 41
3. Labour Force 42
4. Labour Force, by Region 42
5. Employed, by Region 43
6. Employed Non-agriculture, by Region 43

Section 4. Labour—Concluded

7. Unemployed, by Region 44
8. Unemployment Rate, by Region 44
9. Not in the Labour Force, by Region 45
10. Activities of Unemployment Insurance Commission 45
11. Time Lost in Work Stoppages 46
12. Employment Indexes, by Industrial Division 47
13. Employment Indexes, by Province 48
14. Employment Indexes, by Manufacturing Industry 49
15. Average Weekly Wages and Salaries, by Industrial Division 49
16. Average Weekly Wages and Salaries, by Manufacturing Industry 50
17. Average Weekly Wages and Salaries, by Province 50
18. Average Hourly Earnings 51
19. Average Weekly Hours 52

Section 5. Prices

1. Industry Selling Price Indexes 53
2. General Wholesale Price Index 56
3. Other Price Indexes 56
4. Consumer Price Index 57

Section 6. Manufacturing

1. Total Inventories, Shipments, Orders 58
2. Manufacturing Shipments, Selected Industries 59
3. Manufacturing Inventories, Selected Industries 61
4. Manufacturing Shipments and Unfilled Orders by Economic Use Classification 63
5. Manufacturing Inventories Owned and Raw Materials by Economic Use Classification 64
6. Manufacturing Goods in Process and Finished Products by Economic Use Classification 65
7. Tobacco and Beverages 66
8. Rubber 66
9. Rubber Products 67
10. Raw Hides, Skins, Finished Leather 67
11. Production of Leather Footwear 68
12. Primary Textiles 68
13. Production of Sawn Lumber 69
14. Pulpwood, Wood Pulp and Newsprint 69
15. Primary Iron and Steel 70
16. New Motor Vehicles 71
17. Refrigerators, Freezers, Washing Machines and Clothes Dryers 72
18. Radio and Television Sets 72

Section 7. Fuel, Power, Mining

1. Electric Power 73
2. Electric Power Available, by Province 73
3. Coal and Coke 74
4. Crude Oil and Natural Gas 74
5. Petroleum Products 75
6. Metals 76
7. Non-metallic Minerals 77

Section 8. Construction

1. Building Permits, by Type 78
2. Building Permits, by Province 78
3. Dwelling Units, Started, All Areas 79
4. Dwelling Units, Completed, All Areas 79
5. Dwelling Units, Under Construction, All Areas 79
6. Dwelling Units Started, Centres 10,000 and Over 80
7. Dwelling Units Completed, Centres 10,000 and Over 80
8. Domestic Shipments of Building Materials by Canadian Manufacturers 81
9. Mortgage Loans, Approvals 82

Page

Section 9. Food and Agriculture

1. Farm Cash Receipts, by Source 83
2. Farm Cash Receipts, by Province 83
3. Farm Implement and Equipment Sales at Wholesale Prices, by Province 83
4. Slaughter and Cold Storage Stocks 84
5. Selected Agricultural Prices 84
6. Exports of Grains and Livestock Products 85
7. Milk, Milk Products and Eggs 85
8. Fish 86
9. Manufactured Food 86
10. Sugar 87

Section 10. Domestic Trade

1. Value of Retail Trade 88
2. Department Store Sales and Stocks 90
3. Wholesale Sales 90
4. Chartered Banks' General Loans 91
5. Retail Credit, by Type of Store 91
6. Consumer Credit, Selected Holders 92

Section 11. External Trade

1. Merchandise Exports, Major Countries and Areas 93
2. Merchandise Imports, Major Countries and Areas 94
3. Merchandise Exports, by Commodity 95
4. Merchandise Imports, by Commodity 97

Page

Section 12. Transportation

1. Carloadings of Revenue Freight 99
2. Railway Operating Statistics 100
3. Operating Statistics of Canadian Motor Carriers 100
4. Operating Statistics of Canadian Air Carriers 101
5. Operating Statistics of Canadian Pipelines 101
6. Shipping and Canal Traffic 102

Section 13. Finance

1. Bank of Canada 103
2. Chartered Banks 104
3. Currency and Chartered Bank Deposits 105
4. Cheques Cashed in Clearing Centres 106
5. Life Insurance Sales 107
6. Life Insurance Payments 107
7. Security Issues and Retirements 108
8. Security Prices 109
9. Stock Exchange Statistics 110
10. Commercial Failures and Liabilities 110
11. Government Revenues 111
12. Government Expenditures 111

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Section 3, Table 3.1 – Financial Flows Matrix

The National Income and Expenditure Accounts revisions result in some conceptional and statistical changes to the Financial Flow Accounts. Revised data for the Financial Flow Accounts are not comparable with those of earlier periods which do not reflect these changes. For details of these revisions see *National Income and Expenditure Accounts, 1926-68.*

A new publication of the historical quarterly series for all sector and category tables, and annual matrices covering the first quarter 1962 onwards, is expected to be released in 1972.

Data for the second quarter 1971 are published in the present issue of the Review. Supplementary tables covering revised second quarter 1970 and 6 months ended June 30, 1970 and 1971 appear on pages 114-119 of this issue.

LABOUR FORCE SURVEY

The supplementary Labour Force Survey charts on pages 4, 5 and 6 have been reproduced from *The Labour Force* Catalogue 71-001, September 1971 issue.

COME & EXPENDITURE ACCOUNTS, BALANCE OF INTERNATIONAL PAYMENTS (More detail in Section 3, Tables 1.2 and 4.1)

A REMARKABLE UPSURGE IN CONSUMER OUTLAYS ON GOODS AND SERVICES, UP 4.3 PER CENT, AND A QUICKENED PACE OF ENDING ON BUSINESS GROSS FIXED CAPITAL FORMATION PUSHED UP THE GROSS NATIONAL PRODUCT IN THE SECOND QUARTER BY MOST 3 BILLION DOLLARS, OR 3.3 PER CENT, TO REACH A LEVEL OF 91 BILLION DOLLARS. IN PHYSICAL VOLUME THE GROWTH PRODUCTION OF 2.1 PER CENT WAS MUCH LARGER THAN ANY EXPERIENCED SINCE 1969. THE STRONG GAIN IN PRODUCTION WAS FLECTED ON THE INCOME SIDE BY A SHARP ACCELERATION IN THE RATE OF INCREASE OF LABOUR INCOME AND BY A CONTINUING ZABLE RECOVERY IN CORPORATION PROFITS.

THE CURRENT ACCOUNT SURPLUS CONTINUED TO FALL SHARPLY IN THE SECOND QUARTER OF 1971 TO REACH $174 MILLION THE LEVEL RECORDED IN THE MIDDLE TWO QUARTERS OF 1970.

THE PRINCIPAL FEATURE WAS THE RISE IN MERCHANDISE IMPORTS.

	gross national product[1] at current prices	gross national product[1] at 1961 prices	personal expenditure on goods and services	business gross fixed capital formation	labour income	corporation profits before taxes[1,2]	balance of international payments: merchandise[3] exports[3]	merchandise[3] imports[3]	service receipts	service payments	transfer receipts	transfer payments	current account balance

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documenta evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Censu of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number i non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancée and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of loss of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. T seasonally adjusted data includes an arbitary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the char in other farm-held inventories. Because of the arbitary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes income of independent professional practitioners. ⁶See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts, Second Quarter 1 (Statistics Canada. 13-001).**

---

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than governr business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and gov ment business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital exper ture is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effec price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The differe between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). ⁵See footnote 4, Table **Source: National Income and Expenditure Accounts, Second Quarter 1971 (13-001), Statistics Canada.**

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars y the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected y compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in he implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[1] Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated s associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment f insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quarrly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property tax rates have been generally pward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1.9.**

---

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

[1] Receipts and payments in this summary are Balance of Payments data. They are consistent with Gross National Expenditure concepts after adjusting withholding tax additions and revisions not yet reflected in the National Income and Expenditure accounts. [2] Trade of Canada figures with certain valuation timing adjustments appropriate for Balance of Payments.

---

[1]A minus sign except for official monetary movements, indicates an outflow of capital from Canada. [2]Includes guaranteed issues. [3]Bank balances and other short-term funds abroad (excluding official reserves). [4]Includes changes in loans and accounts receivable and payable, and also balancing item representing difference between recorded measurements of current and capital accounts. [5]Canada's Special Drawing Rights are shown from the first quarter 1970. SDR's were issued January 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement. **Sources for above tables: Annual and Quarterly Estimates of the Canadian Balance of International Payments (67-201 and 67-001), Statistics Canada.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: The Labour Force (71-001), Statistics Canada.**

[1] See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force (71-001), Statistics Canada.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The es timates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] Canad totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences resul from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force (71-001 Statistics Canada.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are no shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes als publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.**

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in t month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. Excludes agriculture, fishing, trapping ar public administration and defence. **Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.**

[1] See footnote 1 and source in Table 13. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 12. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in th month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. **Source: Employment an Average Weekly Wages and Salaries (72-002), Statistics Canada.**

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review. Indexes for Quebec City and Thunder Bay (1969=100) are released each month in Statistics Canada Daily (Statistics Canada Catalogue No. 11-001). **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Annual figures for inventories and unfilled orders are end of December values. [4] Total manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long ter contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders I Manufacturing Industries (31-001), Statistics Canada.**

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification based on the 1960 standard industrial classification (million dollars)

end of period	inventories owned							inventories held: raw materials						
	consumer goods							consumer goods						
	non-durable	durable	machinery and equipment	construction materials and components	other intermediate goods and supplies	export-based industries	supplementary classification: automotive products	non-durable	durable	machinery and equipment	construction materials and components	other intermediate goods and supplies	export-based industries	supplementary classification: automotive products

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue.**

---

[1] Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discor tinuity is virtually insignificant except perhaps in two classifications, i.e. girls' under size 4 and infants' and "little children's". **Source: Footwear Statistic (33-002), Statistics Canada.**

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipment to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural ste fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plan [5] Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industr

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.**

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. **Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Trade of Canada, Exports (65-004), Imports (65-007), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1]Includes crud oil, condensate and pentanes plus. [2]Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3]Gros new production by field less field flared and waste. [4]By gas utilities. **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilitie (55-002), Statistics Canada.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

Note: Components may not add to totals due to rounding differences. [1]The data are collected for 1,400 municipalities and individual figures are available on request. [2]Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William - Port Arthur (Thunderbay City). **Source: Building Permits (64-001), Statistics Canada.**

---

[1]The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the tabl due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normall follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerabl change may develop before the completion of the operation. **Source: Building Permits (64-001), Statistics Canada.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), Statistics Canada.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passc inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolit areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The mainder of the country is covered on a sample basis quarterly. **Source: New Residential Construction (64-002), Statistics Canada.**

[1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse products, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act. **Source: Farm Cash Receipts (21-001), Statistics Canada.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflec average of wages paid to all male farm help regardless of age and skill. Data available for Jan., May and Aug. only. [3] Excl. of NFLD. Western grain prices use in the construction of the Index prior to Aug 1, 1967 are final. From Aug 1, 1967 to date, the western grain prices used in the Index are initial prices only for whec oats and barley. [4] The number of bushels of No. 1 feed barley, or cwt of mixed feed, that equal in value 100 lbs. of Grade B live hog. Effective January 1969, equal in value to 100 lbs. of Index 100 live hog. [5] Price of 100 lbs. good steer as a % of the price of 100 lbs. live hog, Grade B, or good lamb. Effective Janua 1969, as a % of the price of 100 lbs. live hog, Index 100. [6] Price of 100 lbs. good steer as a % of the price of 100 lbs. good lamb. [7] Quotations refer to steers o weights. [8] Grade "B" hogs. Effective Jan 1969 prices based on Index 100, hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farmer (62-004); Farm Wages in Canada (21-002) Occasional; Course Grains Quarterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), Statistic Canada and Livestock and Meat Trade Report, Dept. of Agriculture.**

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted.
[2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months.
[3] Includes baking and frying oils and fats.
[4] Includes stocks held by manufacturers and other warehouses.
[5] Includes fresh sausage, frankfurters, weiners and all other sausage.
[6] Includes solid, coated, bulk, packages and novelties.
[7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales.

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all oth stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Sourc** **Retail Trade (63-005), Statistics Canada.**

[1] Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly servic credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. See als **Credit Statistics (61-004)**. [2]Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings ar treated jointly beginning in January 1970. [3]Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with th financing of retail purchases of consumers' goods and repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for Decembe 1970, the net figure was lower than the gross figure by 13.5 per cent. [4]Starting with January 1970, the sales finance companies component of consumer credit ha been changed by the transfer of passenger cars financed for commercial purpose, from consumer goods to commercial goods. [5]Personal cash loans of up to $1,50 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [6]Personal cash loans of over $1,500. usuall repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure 16.5 per cent. [7] The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series ar repeated in the unadjusted form.[8] Beginning in January 1971, the Other Personal Cash Loans and Installment financing components do not include interest and othe unearned income finance charges. **Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept.** Agriculture.

---

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculate separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most importa are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade** Canada, Exports (65-004), Statistics Canada.

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by t average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machine have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (6 now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Impo (65-007), Statistics Canada.**

Table 1: carloadings of revenue freight on Canadian railways[1] (thousand cars)

years and months	total railway revenue freight loadings (carload and non-carload) (000 tons)	total revenue cars loaded (carload only)	farm products and food						mine products				forest products		
			wheat	other grain and grain products	fresh fruits and vegetables	other agriculture products	animals and their products	prepared food products	iron ore and concentrates	other metal ores and concentrates	potash[2]	coal, sand, cement and other mine products	lumber and plywood	pulpwood	other forest products

[1] Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations United States railways operating in Canada but excludes operations of Canadian railways in the United States. [2] Monthly averages for 1968 and 1969 may di from the averages of the monthly data due to revisions which cannot be allocated by months. [3] Includes traffic interchanged between Canadian railways. **Sourc Railway Operating Statistics (52-003) monthly, and (52-206) annual, Statistics Canada.**

[1] Prior to 1970, figures included the operations of scheduled and non-scheduled carriers in financial reporting groups I-IV. Figures for 1970 include only the perations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, acific Western Airlines, Quebecair and Trans-air) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commer-ial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage. Note: Nordair was put into Financial Level II (from III) in anuary 1970 i.e. 1969 and previous dates do not include Nordair. **Source: Civil Aviation (51-001), Statistics Canada.**

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base etals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks cluded in industrial mines are listed on the exchanges as industrials, Their operations include smelting and refining. [5] Includes also the machinery industries xcept electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. ---

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does n include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontari Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements ma under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commerci** Failures (61-002) Quarterly, Statistics Canada.

Note: The monthly data do not add to the annual totals which include supplementary payments arising from the closing of the accounts. [1] This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, advances and investments. [2] For comparison purposes, annual figures for 1968-69 and 1969-70 represent "Grants to Universities—Payments to the Association of Universities and Colleges of Canada" (col. 6), "Capital Subsidies for the Construction of Commercial and Fishing Vessels" (Col. 8) and "Interim Payments to Railways to Maintain Freight Rates at Reduced Levels" (Col. 22). [3] As of April 1, 1969 Industry and Trade and Commerce are combined. [4] Under the Technical and Vocational Training Assistance Act. [5] Government contributions under the Hospital Insurance and Diagnostic Services Act. [6] Includes treatment and rehabilitation services. **Sources: Canada Gazette and Dept. of Finance.**

*Data for April to August are shown only where there is continuity from fiscal year 1970-71. This table is currently being revised.

Canadian Statistical Review

Cette revue est disponible en édition française. Revue Statistique du Canada, nº du catalogue 11-003F.

Series published in this Review are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of the data bank contents may be purchased on magnetic tape or as computer printouts. For additional information, see inside back cover.

Selected Economic Indicators appearing in the Section 1 are published in seasonally adjusted form. Seasonally adjusted data are most useful for analysis forecasting as they bring out the underlying trends of economic time series. Seasonal adjustments remove the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing. Additional adjustments may be necessary for series which contain variation due to the difference in working or trading-days in each month or for holidays or other events with variable dates. Such adjustments are made prior to the seasonal adjustment but are treated as part of the seasonal adjustment.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the US Bureau of the Census Method II, X-11 version.

The *MCD*, or *Months for Cyclical Dominance*, in a table containing seasonally adjusted series indicates the smallest span of months for which the average change in the cyclical factor is greater than that in the irregular factor. For the smoothest series the MCD is 1, for the most erratic series it is 6. Applying moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend-cycle.

Smoothed data have been used for the graphs of some of the seasonally adjusted series with MCD of 4, 5 or 6. A 5-term moving average was applied for smoothing these series.

* * * * * * *

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers. Historical data for Selected Economic Indicators, both unadjusted and adjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

SYMBOLS

The following standard symbols are used in this and other Statistics Canada publications:

..	figures not available
...	figures not appropriate or not applicable
-	nil or zero.
†	advance estimates.
p	preliminary figures.
r	revised figures.
x	confidential to meet secrecy requirements of the Statistics Act.
MCD	months for cyclical dominance (see above).

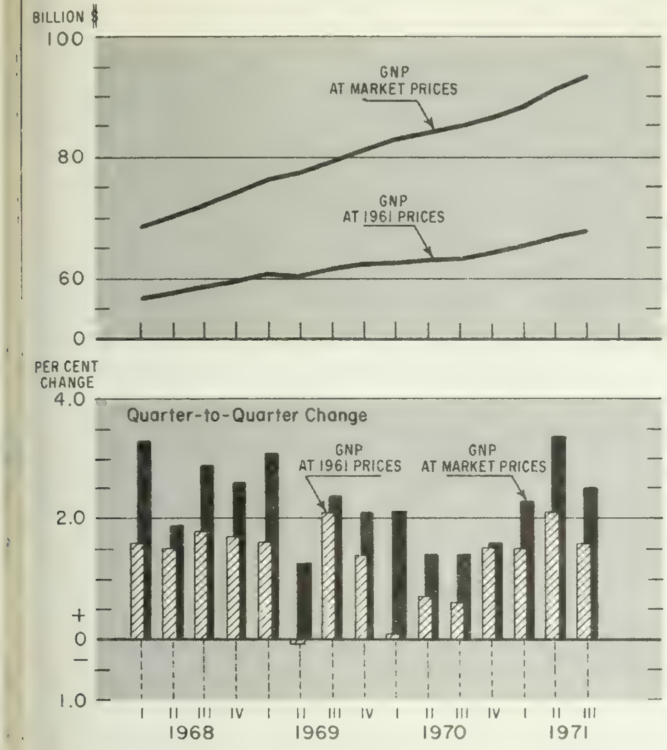
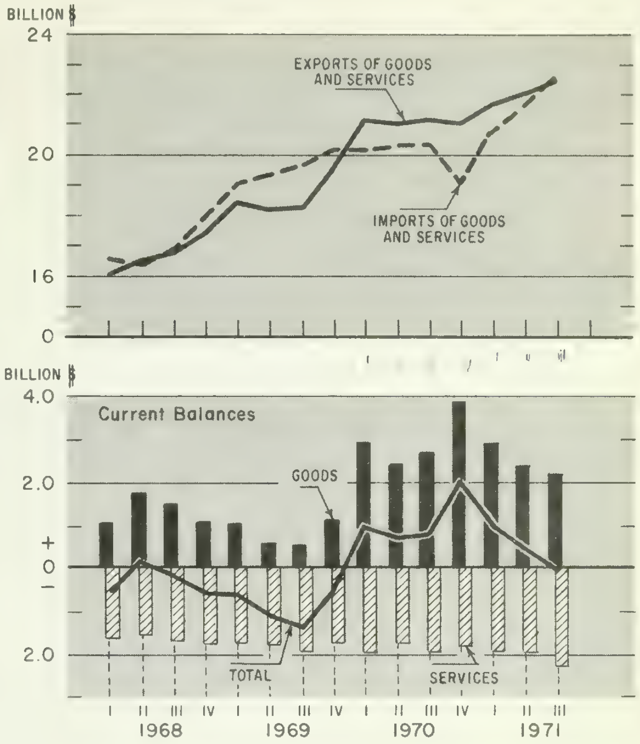
National Income and Expenditure Accounts, 3rd Quarter 1971

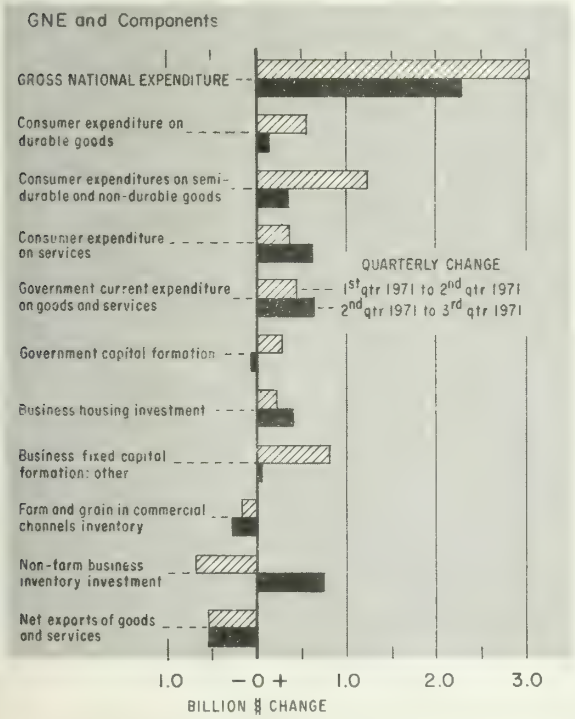
GNP in current dollars rose 2.5 per cent, real GNP rose 1.6 per cent ....



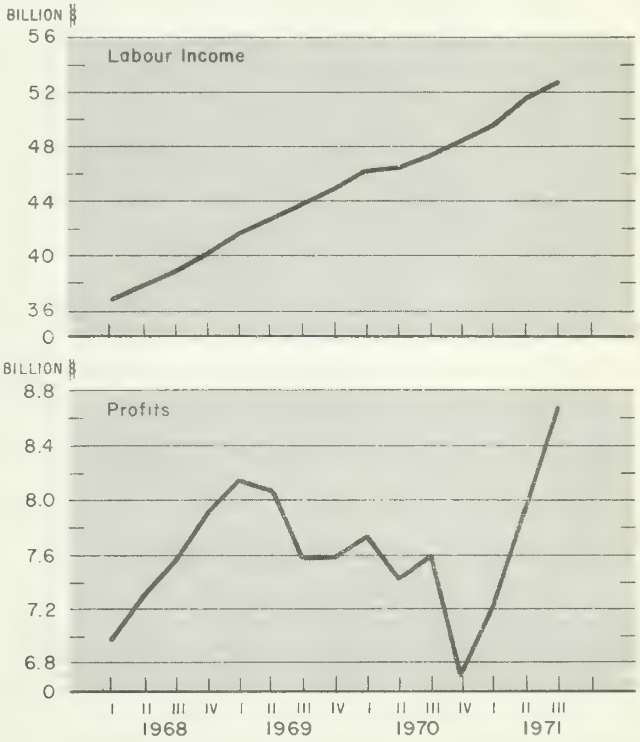
.... with no positive contribution from transactions with non-residents,...



....however, higher consumer expenditures, government current expenditures on goods and services, business investment in housing, and a large swing in non-farm business inventory....



.... together with continued strength in labour income and profits helped to keep the second quarter momentum.



ALL DATA SEASONALLY ADJUSTED AT ANNUAL RATES.

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, benchmark data, etc. Changes in this issue are as follows:

Annual data have been removed from some tables of the review. They will be replaced in the January 1972 issue.

Section 3, Table 3.1 – Financial Flows

Supplementary Financial Flows Matrices for the second quarter 1970 and six months ended June 30, 1970 and 1971 were published in the November issue of this publication.

Section 5, Table 4 – Consumer Price Index

Monthly consumer price indexes for Quebec City and Thunder Bay from January 1970 are now included in this table. It should be noted that the time base for these two indexes is 1969, instead of 1961 which is the time base for all other regional city indexes. Explanatory notes on the construction of the indexes for Quebec City and Thunder Bay are available from Retail Prices Section, Prices Division of Statistics Canada.

Section 9, Table 5 – Selected Agriculture Price Indexes (Farm Input Price Index, 1961 = 100)

The Farm Input Price Index replaces one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services Used by Farmers, 1935 - 39 = 100. The latter was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The new price index replaces the Composite Index Exclusive of Living Component from 1961 forward. The Farm Family Living component of the 1935 - 39 series has not been replaced by an updated counterpart, and publication has been suspended.

Farm Input Price Indexes measure through time changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Total and component price indexes for Eastern, Western, and all Canada, are calculated quarterly and annually on a 1961 = 100 time base.

Price Indexes from 1961 to the third quarter 1971, weighting diagrams, and a detailed description of concepts, methods and data sources are contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue No. 62-534, and are reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue No. 62-002. Current price indexes are published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961 = 100*. Catalogue No. 62-004, and in the monthly publication, *Prices and Price Indexes*, Catalogue No. 62-002.

Total and selected component price indexes for Canada from 1969 to the third quarter 1971 are published in the present issue of the Review.

Section 9, Table 9 – Manufactured Food

Data on "shipments" have been deleted from this table; for margarine "stocks, end of period" and for salad oils "production" figures have been introduced instead. Further information concerning these changes can be obtained from the Foods, Beverages and Textiles Section of the Manufacturing and Primary Industries Division, Statistics Canada.

Section 9, Table 10 – Sugar

Data for production of refined granulated, yellow and brown sugar are no longer available. These two series have been deleted and replaced by beet and cane sugar production.

RECENT PUBLICATION OF INTEREST

Canada's International Investment Position, 1926 to 1967 (aggregate series on Canada's assets and liabilities together with detailed series on assets extended to 1969), Catalogue No. 67-202, Statistics Canada.

NATIONAL INCOME AND EXPENDITURE ACCOUNTS, THIRD QUARTER 1971

Preliminary results of the National Income and Expenditure Accounts for the third quarter of 1971 indicate a continuation of the pattern of substantial gains in production evident since the fourth quarter of 1970. A feature of the third quarter was a sharp pick-up in the industrial sector, particularly noticeable in the indicators of production. The very sizable increase in the number of jobs created in the third quarter was not reflected in a significant decline in the unemployment rate because of an unusually rapid growth in the labour force. Aggregate measures of price movements rose at about the same rate as in the second quarter, although there were some sharp rises, especially in the prices of certain construction materials.

Gross National Product, seasonally adjusted at annual rates, rose by $2.3 billion to reach a level of $93.7 billion. This gain was somewhat larger than that realized in the first quarter of $2.0 billion, but considerably smaller than the $3.0 billion increase in the very strong second quarter. (It may be noted that revisions of a number of series, in particular labour income, fixed capital formation and value of physical change in both farm and non-farm inventories[1] had the net effect of raising the first and second quarter GNP estimates by $304 million and $380 million respectively.) In percentage terms, GNP rose by 2.5% ir the third quarter, after rising by 3.4% in the second quarter and by 2.3% in the first quarter. After removing that part of the increase in the value of goods and services that reflected higher prices rather than volume increases, GNP rose by 1.6% in the third quarter. This was the fourth consecutive quarter showing sizable gain in real output.

By the end of the third quarter, the Canadian economy had been expanding at a sizable rate for about a year. GNP was 10.2% larger in the third quarter 1971 than in the third quarter of 1970. The real growth during the same period amounted to 6.9%. A nine months comparison also shows an acceleration in economic growth. In the first nine months of 1971, GNP was 8.7% larger in value and 5.3% larger in volume than in the comparable period in 1970. This compares with GNP increases for 1970 over 1969 of 7.5% in value, and of 3.3% in volume. The assumption that there would occur no further output gain this year would yield a real growth of 5.6%; if output grew by 1.0% in the fourth quarter, the increase for the year as a whole would be 5.9%. For the year as a whole, it also appears likely that the rate of increase of the implicit price index for GNP will show a deceleration from the rates of increase of 4.1% for 1970 and of 4.7% for 1969.

Personal expenditure on consumer goods and services provided a major stimulus to demand, though to a smaller extent that in the previous quarter. After surging forward by $2,144 million in the second quarter (4.2%), consumer spending rose by an additional $1,068 million (2.0%) in the third quarter, reaching a level of $54,168 million. Not unexpectedly, in view of the very large 5.7% rise in expenditure on goods in the second quarter, the third quarter rise in consumer spending was much more pronounced in services, up 3.1%, than in goods, up 1.4%. Within goods, spending on durable items continued to pace the advance. Expenditure on furniture and house furnishings rose particularly sharply in the third quarter, by 6.5%, no doubt largely reflecting the very high level of housing completions in that quarter. Spending on new automobiles rose by 2.5%; in each of the two previous quarters this component had risen by around 15%, providing the bulk of the increased outlays on durable goods. (These spectacular gains partly reflected the satisfaction of a backlog of demand due to the prolonged strike of a major producer in the fourth quarter.) Expenditure on household appliances also rose, and that on most other durable goods generally showed some modest additional gains over their high second quarter level. Outlays on semi-durable goods were unchanged, a 5.4% increase in semi-durable household furnishings (items such as china and kitchen ustensils) being offset by declines in articles of clothing. In the non-durable goods category, which showed a rise in outlays of 1.6%, the major increases were shown by fuel and electricity, up 2.3%, and by food, up 1.5% after a rise of 2.9% in the previous quarter.

The acceleration in the rate of spending on services (the third quarter rise of 3.1% compares with increases generally below 2.0% in recent previous quarters) was largely due to a sizable increase in Canadian tourists' expenditure abroad. On a domestic basis, that is excluding the expenditures made by Canadian residents abroad but including the expenditures of foreign residents in Canada, the rise in service outlays was 2.3%. Among other service components, notable gains occurred in spending on restaurant meals, on lodging in hotels and motels, on legal and financial services and on shelter.

Government current expenditure on goods and services rose at an accelerated pace in the third quarter. The rise of $624 million represented a percentage increase of 3.5% compared with a 2.7% increase in the second quarter. All of the increased spending occurred at the provincial and local levels of government, which were up by 12.2% and 5.8% respectively, as federal government spending, which had risen sharply in the first half of the year, declined by 6.7% in the quarter. In contrast to current expenditure on goods and services, government outlays on fixed capital formation showed practically no change in the third quarter. By level of government, fixed capital outlays declined at the federal and provincial levels but rose at the municipal level.

---

[1] In the farm sector, the 1971 value of the new crop is now estimated to be $1,356 million, based on the November estimate of production. This compares with a figure of $1,108 million estimated at the time of the second quarter and based upon preliminary estimates of crop acreage.

Business residential construction rose by 9.6%. This sector has been strongly and continually expanding since the third quarter of 1970. The third quarter rise of $404 million brings the level of this investment to $4,632 million, more than 40% above its trough in the second quarter of 1970. Because of sharp increases in the prices of certain construction materials, especially lumber, in the third quarter, probably reflecting mounting demand pressures, the gain in volume of 6.3%, though considerable, was substantially less than the gain in value. In the second and third quarters, the emphasis was on the construction of single units, which showed rises of over 15% in each quarter. This was a reversal of the previous tendency towards proportionately much larger outlays on multiple than on single units. The high levels of starts in the months up to October, the sustained demand for mortgage funds, and the federal government commitment of more funds for housing announced in the October mini-budget, make it appear likely that the level of outlays will be approximately maintained in the fourth quarter. As a consequence, the rise in expenditure on residential construction will probably rise by over 20% in 1971.

In contrast to the sustained growth displayed by housing outlays, business spending on plant and equipment did not grow significantly in the third quarter. Very preliminary estimates indicate an increase of 0.4%, entirely due to a modest increase of 1.2% in spending on machinery and equipment as spending on non-residential construction declined slightly. However, it must be noted that growth of these business outlays had apparently been extremely large in the second quarter. (In volume terms investment in machinery and equipment in the third quarter remained flat and that on non-residential construction fell by 2.3%.) Within non-residential construction, building construction registered an increase, but this was more than offset by a decline in engineering construction (other than highways and railways), which had risen particularly sharply in the second quarter. In machinery and equipment, the increase in investment reflected mostly increased imports of non-farm machinery.

A notable development in the third quarter was the build-up in non-farm business inventories which amounted to $228 million (seasonally adjusted at annual rates). In the light of more complete information, the second quarter figure, which originally showed practically no change in the value of physical stocks, has now been revised to show a $540 million depletion, partly in industrial machinery, which showed large increases in sales in the second quarter. The resultant swing of $768 million from a depletion to an accumulation was a major contributing factor to the third quarter expansion. The build-up occurred entirely at the retail trade level, as stocks in manufacturing and in wholesale continued to decline. The accumulation in retail trade, which was reflected in sharp increases in shipments in the quarter while sales rises were moderate, was widespread, but most notable in durable goods, where it was almost entirely due to increases in the stocks of motor vehicle dealers. Stocks in manufacturing had declined by successively larger amounts in the first three quarters of 1971. However, whereas previous declines appeared largely due to sluggish production failing to keep up with rising demand, the decline in the third quarter occurred despite substantial rises in manufacturing production, yet insufficient to meet the very large increase in shipments. New orders rose even faster than shipments and as a result the quarter ended with a greater backlog of unfilled orders than in the second quarter. The stock-to-shipments ratio fell sharply from 1.98 in the second quarter to an historically very low level of 1.91.

As in the first two quarters of the year, the net effect of current transactions in the external sector was again a source of weakness. The third quarter decline in the balance of trade in goods and services of $524 million, on a national accounts basis, which was of the same magnitude as in the second quarter, caused a swing from an overall surplus of $464 million to a small deficit of $60 million. This was the first deficit since the fourth quarter of 1969. Although exports continued to rise quite sharply, imports, especially of non-merchandise items, rose faster, leading to declines in both the merchandise and the non-merchandise balances. On the basis of preliminary information, it is not possible to ascertain whether the new economic measures announced in mid-August by the United States government had an impact on the volume and composition of Canadian exports to the United States in the third quarter.

In the merchandise account, the surplus fell by $212 million to $2,208 million as a gain of $328 million in exports was more than offset by a rise of $540 million in imports. (The decline in the balance was centered on trade with the United States; exports to that country fell while imports rose sharply.) In percentage terms, merchandise exports rose by 1.8%, after rises of 2.1% in the second quarter and of 4.1% in the first quarter. Wheat, wheat flour, lumber and other building materials and automotive products (except automobiles) registered the best gains. The bulk of the export gain was directed to the United Kingdom, Japan and Latin America, as exports to the United States fell slightly and exports to the European Economic Community fell sizably. Merchandise imports rose by 3.5%. Although large increases were recorded in imports from all major trading partners, in particular from the United Kingdom, up 10.8%, imports from the United States, up 5.3%, contributed over three fourths of the total increase. The increase in imports was widespread. In the non-merchandise account the deficit widened in the third quarter by $312 million to $2,268

AN INTEGRATED EDUCATION INFORMATION SYSTEM DEVELOPMENT

Yvon Fortin, Ross Grenier, Eve Kassirer*

Objectives of the Information System

Among the goals of the Education Division of Statistics Canada, none ranks higher than the creation of a fully integrated computerized total education information system. Such an information system could be considered analagous to a hologram, a picture which, when viewed from different perspectives, reveals additional characteristics of the subject or phenomenon under observation. In times of rapid social change it is important for all members of society to be aware of the array of developments occurring in its principal institutions, including education which is the full-time activity of nearly seven million Canadians. A national education information system can serve this purpose.

A wide range of questions can be addressed to a total information system or to its sub-systems, such as: What is the magnitude of interprovincial student mobility? At what levels of education? What distinguishes the mobile student from his peers? In what programs and courses of study are registrations dropping? Which are increasing? What expansion of educational resources has taken place, and where? Is existing expansion adequate? Is the mix of educational output appropriate to our needs? What skills and talents are needed by our teachers to meet these kaleidoscopic changes? At what cost? Are Canadians receiving full value for the percentage of their tax dollar devoted to education?

These, and a host of other related questions, are continually being asked by education planners in their effort to give direction to Canada's education and her social goals. In this effort, the most valuable commodity needed is comparable, timely and current education data. Precisely with this in mind, the Education Division of Statistics Canada is collaborating with education officials in Canada to develop a nation-wide integrated computerized education information system. The objective of this developing system is to create an accessible data base of fundamental elements at the greatest and most meaningful disaggregated level on students, teaching staff, finance and facilities, at the elementary, secondary and tertiary levels. Common concepts, classifications and definitions will link these subsystems. This two-tiered system will report back to suppliers of data and at the same time disseminate integrated data to the public. The computerized system will facilitate the flow of immediate, detailed data by province, region and institution.

Developments

1. A general conceptual framework of the total system has been formulated, but will continually be refined to articulate the changing empirical elements in specific education structures in Canada. Details and levels of integration will only become known once a complete cross-section of Canadian education officials has been consulted. The need for such a national information system was recognized by the Council of Ministers of Education in the early stages of its existence. Substantial forward strides were made by the Ministers' Information Sub-Committee under the able direction of Dr. R.W. Jackson, Director of the Ontario Institute of Studies in Education. Since 1969, the work initiated by this group has been carried on by the Education Division of Statistics Canada.

2. In conjunction with educational institutions, provincial governments and other suppliers of data, Statistics Canada is developing classifications and specific socio-economic items to be collected; standardized definitions and concepts of items; and standardized terminology. Above all, the practicality of such a system is dependent on the comparability of information at various levels of aggregation, in which common definitions have been employed.

3. The procedure selected is to approach the various levels of education, step by step, beginning with the university, and concentrating on one subsystem in each region. A solid start has been made at the university level in the Atlantic provinces. In collaboration with the Atlantic Association of University Business Officers, Statistics Canada has been working for the past year toward the creation of a comparable financial reporting system for all universities in the Atlantic region. From the beginning, this pilot project has enjoyed close and continuing liaison with the various Grants Commissions. This has resulted in the development of a financial information system which satisfies the needs of the provincial governments as well as the expressed wishes of the universities to share financial information among themselves. A unique and important feature of this new financial reporting system is the breakout of university direct costs on a departmental basis. This will allow for a start to be made on the costing of various programs of study. It is expected that refinements to the system will be made as experience is gained. Over a relatively short period a large amount of data should be generated which will be valuable for policy and for evaluation. Financial officers in other regions will be invited to examine the methodology of this pilot project once the results have been analyzed.

The transmission, storage and retrieval of financial data will make use of computer technology, which, through the creation of classifications, and codes common to enrolment, finance and staff data, will eventually make available a vast body of interrelated data. The possibilities of establishing vital linkages between each of the files are great;

INCOME & EXPENDITURE ACCOUNTS, BALANCE OF INTERNATIONAL PAYMENTS (More detail in Section 3, Tables 1.2 and 4.1)

THE GROSS NATIONAL PRODUCT SHOWED A FOURTH CONSECUTIVE SIZEABLE GAIN IN THE THIRD QUARTER OF 1971. IT ROSE BY 2.5 PER CENT TO REACH A LEVEL OF $93.7 BILLION. THE GROWTH IN VOLUME WAS 1.6 PER CENT. CONSUMER SPENDING, GOVERNMENT CURRENT EXPENDITURE ON GOODS AND SERVICES, HOUSING OUTLAYS, AND INVESTMENT IN NON-FARM INVENTORIES WERE THE COMPONENTS OF DEMAND WHICH MOST CONTRIBUTED TO THIS GROWTH. ON THE INCOME SIDE, CORPORATION PROFITS, UP 9.3 PER CENT, CONTINUED TO EXPAND RAPIDLY AND LABOUR INCOME ROSE BY 2.1 PER CENT, AFTER AN UNUSUALLY STRONG .0 PER CENT RISE IN THE SECOND QUARTER.

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentar evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Censu of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number ir non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the chang in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes ne income of independent professional practitioners. [6] See footnote 4, Table 1.2. **Source: National Income and Expenditure Accounts (13-001), Statistics Canada**

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than governmen business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and govern ment business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expendi ture is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect o price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). [5] See footnote 4, Table 1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[1] Includes the newly imposed taxes on life insurance companies. At the present time, for National Accounts purposes, life insurance companies are treated s associations of individuals in so far as their investment activities are concerned. The new taxes are thus included here pending a complete review of the treatment f insurance. [2] Excludes the special refundable tax on corporations introduced in May 1966. Refunding of the tax began in 1968. [3] Withholding taxes. [4] The quar-rly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four since real property tax rates have been generally pward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series. **For source see Table 1.9.**

---

[1] These implicit indexes are currently weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted Data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change. **For source see Table 1.9.**

[1] Receipts and payments in this summary are Balance of Payments data. They are consistent with Gross National Expenditure concepts after adjusting for withholding tax additions and revisions not yet reflected in the National Income and Expenditure accounts. [2] Trade of Canada figures with certain valuation and timing adjustments appropriate for Balance of Payments.

[1] A minus sign except for official monetary movements, indicates an outflow of capital from Canada. [2] Includes guaranteed issues. [3] Bank balances and other short-term funds abroad (excluding official reserves). [4] Includes changes in loans and accounts receivable and payable, and also balancing item representing difference between recorded measurements of current and capital accounts. [5] Canada's Special Drawing Rights are shown from the first quarter 1970. SDR's were issued January 1, 1970 by the International Monetary Fund (IMF) to member countries participating in the agreement. **Sources for above tables: Annual and Quarterly Estimates of the Canadian Balance of International Payments (67-201 and 67-001), Statistics Canada.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: The Labour Force (71-001), Statistics Canada.**

[1] See footnote 1, table 3. Labour force obtained as the sum of employed and unemployed from tables 5 and 7. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment o the Canada and regional data having been carried out independently of each other. **Source: The Labour Force (71-001), Statistics Canada.**

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page 7. The small differences result from the seasonal adjustment of the Canada and regional data having been carried out independently of each other. **Source: The Labour Force (71-001), Statistics Canada.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.**

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. Excludes agriculture, fishing, trapping and public administration and defence. **Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.**

[1] See footnote 1 and source in Table 13. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 12. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

---

[1] The data in Tables 12 to 19 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. **Source: Employment and Average Weekly Wages and Salaries (72-002), Statistics Canada.**

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. Information on inter-city retail price differentials is contained in technical note No 6 published in the June 1969 issue of the Canadian statistical review. [3] Indexes for Quebec City and Thunder Bay are on the (1969=100) base. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

Table 1: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [3] Annual figures for inventories and unfilled orders are end of December values. [4] Total manufacturing inventory owned by manufacturers including warehouse stocks. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 2: manufacturing shipments[1] by industry based on the 1960 standard industrial classification (million dollars)

years and months	total shipments	non-durable	durable	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes smoking, chewing and twist. [4] Includes sales to wholesalers or retailers. [5] Subject to Excise Tax. [6] Includes sales for ships' stores and for export. [7] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), Statistics Canada; and Department of National Revenue.**

---

[1] Prior to January 1969 shoe classifications were different from those now in use. The change was undertaken in order to eliminate ambiguity. The discontinuity is virtually insignificant except perhaps in two classifications. i.e. girls' under size 4 and infants' and "little children's". **Source: Footwear Statistics (33-002), Statistics Canada.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. [4] Excluding shipments for re-processing at maker's own plant. [5] Data on shipments of steel shapes to consuming industries are not available for this period (August 69 to November 69) due to the effect of strikes in this industry.

[1] Production plus imports less re-exports, minus exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), Statistics Canada.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gross new production by field less field flared and waste. [4] By gas utilities. **Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), Statistics Canada.**

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are available on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 55 following the amalgamation of the cities of Fort William - Port Arthur (Thunderbay City). **Source: Building Permits (64-001), Statistics Canada.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), Statistics Canada.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), Statistics Canada.**

[1] Cash receipts from farming operations excluding supplementary payments. Excludes Newfoundland. [2] Represents participation payments made by the Canadian Wheat Board direct to producers on crops delivered in previous years. [3] Includes rye, flaxseed, rapeseed, soybeans and corn. [4] Includes clover and grass seed, hay, clover, greenhouse products, mustard seed, sunflower seed, hops, dry beans and dry peas and miscellaneous products. [5] Made under the authority of the Agricultural Stabilization Act. **Source: Farm Cash Receipts (21-001), Statistics Canada.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in section 10, table 3 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), Statistics Canada.**

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1970 and 1971 price indexes are subject to revision. [3] 1971 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] In addition to the components listed, the major group includes Building Repairs, Fencing Construction and Repairs, Mortgage Credit, and Farm Rent. [6] In addition to components listed, the major group includes Seed, Custom Work, Artificial Insemination, Small Tools and Supplies, and Electricity.

Note: The Farm Input Index replaces the Price Index Numbers of Commodities and Services Used by Farmers formerly contained in this table. A brief outline of the change is contained in the **Note to Users** in this issue.

[1] Milk equivalents of cottage cheese are not included in the monthly figures but are included in the monthly averages. [2] Includes case and bulk. [3] As at end of period. Last month is preliminary. [4] Includes butter and cheese imported and in (railway) transit through June 30, 1968. [5] Exclusive of Newfoundland; includes hatching eggs. **Sources: Dairy Factory Production (32-002), Dairy Review (23-001), Stocks of Dairy and Poultry Products (32-009), Production of Eggs (23-003), Statistics Canada.**

---

[1] Monthly totals for current years are not equivalent to annual data due to receipt of additionnal statistics which cannot be allocated by months. [2] Includes also seaweeds and other species such as whales, worms etc. [3] Exports include sea and freshwater fish and shellfish products but exclude bait, meal, oils, offal, livers, fish roe n.e.s. and fishery foods and feeds n.e.s. [4] Total holdings (all forms) of frozen fish commencing october 1969 excludes freshwater species.

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted. [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Includes baking and frying oils and fats. [4] Includes stocks held by manufacturers and other warehouses. [5] Includes fresh sausage, frankfurters, weiners and all other sausage. [6] Includes solid, coated, bulk, packages and novelties. [7] The quarterly data on jams, jellies and marmalades which was previously collected on the basis of production will, starting with the first quarter of 1970, be collected on the basis of factory sales. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006),** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthly Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, Statistics Canada.**

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due t changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all othe stores, the unadjusted and seasonally adjusted department store data for 1968 and subsequent years are not comparable with the data of previous years. **Source Retail Trade (63-005), Statistics Canada.**

Table 1: value of retail trade by type of business and province, based on the 1960 standard industrial classification – concluded

DATA FOR THIS TABLE

ARE

NOT AVAILABLE

---

[1] Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly servic credit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. See als **Credit Statistics (61-004)**. [2] Owing to the considerable extent of common ownership and overlap of function within these two groups of companies their holdings ar treated jointly beginning in January 1970. [3] Conditional sales agreements held by sales finance companies and by consumer loan companies in connection with th financing of retail purchases of consumers' goods and repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for Decembe 1970, the net figure was lower than the gross figure by 13.5 per cent. [4] Starting with January 1970, the sales finance companies component of consumer credit ha been changed by the transfer of passenger cars financed for commercial purpose, from consumer goods to commercial goods. [5] Personal cash loans of up to $1,50 made by companies licensed under the Small Loans Act. Amounts shown are net of interest and other finance charges. [6] Personal cash loans of over $1,500. usuall repaid in installments. From January 1971, amounts shown exclude unearned finance charges; for December 1970, the net figure was lower than the gross figure b 16.5 per cent. [7] The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is present; these series ar repeated in the unadjusted form. [8] Beginning in January 1971, the Other Personal Cash Loans and Installment financing components do not include interest and othe unearned income finance charges. **Sources: Consumer Credit (61-004), Statistics Canada; Bank of Canada, Dept. of Insurance, Dept. of Finance and Dept. Agriculture.**

[1] Column numbers refer to tables 3 and 4 section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc. **Source: Trade of Canada, Exports (65-004), Statistics Canada.**

Table 4: merchandise imports, by commodity, based on the standard commodity classification[1] (million dollars)

---

[1] Column numbers refer to tables 3 and 4, section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by th average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as General purpose machiner have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (6 now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery. **Source: Trade of Canada Import (65-007), Statistics Canada.**

Table 1: carloadings of revenue freight on Canadian railways[1] (thousand cars)

[1] Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. [2] Monthly averages for 1968 and 1969 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [3] Includes traffic interchanged between Canadian railways. **Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, Statistics Canada.**

[1] Includes Class 1 carriers only. These are carriers having $100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. [2] Includes Class I and Class II carriers only. These are trucking firms having $100,000 or more gross annual operating revenues. [3] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for moto bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight (53-005) quarterly, Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, Statistics Canada.**

[1] Prior to 1970, figures included the operations of scheduled and non-scheduled carriers in financial reporting groups I-IV. Figures for 1970 include only the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Trans-air) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage. Note: Nordair was put into Financial Level II (from III) in January 1970 i.e. 1969 and previous dates do not include Nordair. **Source: Civil Aviation (51-001), Statistics Canada.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and undivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. **Source: Statistical Summary, Bank of Canada.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stocks included in industrial mines are listed on the exchanges as industrials. Their operations include smelting and refining. [5] Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Source: Prices and Price Indexes (62-002), Statistics Canada.**

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commercial** Failures (61-002) Quarterly, Statistics Canada.

Note: The monthly data do not add to the annual totals which include supplementary payments arising from the closing of the accounts. [1]This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans advances and investments. [2]For comparison purposes, annual figures for 1968-69 and 1969-70 represent "Grants to Universities—Payments to the Association c Universities and Colleges of Canada" (col. 6), "Capital Subsidies for the Construction of Commercial and Fishing Vessels" (Col. 8) and "Interim Payments to Rail ways to Maintain Freight Rates at Reduced Levels" (Col. 22). [3]As of April 1, 1969 Industry and Trade and Commerce are combined. [4]Under the Technical an Vocational Training Assistance Act. [5]Government contributions under the Hospital Insurance and Diagnostic Services Act. [6]Includes treatment and rehabilitatio services. **Sources: Canada Gazette and Dept. of Finance.**

*Data for April to September are shown only where there is continuity from fiscal year 1970-71. This table is currently being revised.
*March 1970 figures are preliminary in that they do not include supplementary accounts.

(Continued from page 5)

million. Service exports rose by 2.9% while service imports rose by a sharp 7.0%, partly due to a rise in payments in the tourist and travel account.

The profile of merchandise trade so far this year is one of substantial expansion, but with a faster growth of imports than in exports. In the first nine months of 1971 merchandise exports were 4.9% greater than in the first nine months of 1970. Most of the strength in exports was from the sale of barley and wheat, and petroleum and natural gas, lumber and other wood building materials and automotive products, and coal and other crude bituminous substances. However, many declines were registered, in particular, in pulpwood and other crude wood materials, in all metallic ores except zinc and nickel, in most non-metallic minerals, in metal fabricated materials (except in iron and steel) and in newsprint. This was a reversal of the pattern of exports in 1970, when most of these commodities had recorded large increases. In merchandise imports, on the other hand, the increase of 7.4% was very broadly based, the only major grouping to show a decline being food, feed, beverages and tobacco, down by 0.5%. By country, the increase in exports to the United States was mainly responsible for the total increase, as exports to the United Kingdom and most of the other countries dropped, while increases in imports were recorded from all major trading partners.

The most notable features on the income side were the continued rapid growth in corporation profits before taxes and the sizable upward revisions of labour income for the first half of the year. Corporation profits, (on a national accounts basis), which had risen by 7.6% in the first quarter and by 10.1% in the second quarter, recorded a third important gain of 9.3% in the third quarter. The third quarter level of corporation profits of $8,684 million was 14% above that of the third quarter of 1970, and 6.4% above the previous record level of $8,160 in the first quarter of 1969. Undistributed corporations profits have been rising during 1971 at an even faster rate than profits; they rose by 13.7% in the first quarter, by 16.6% in the second quarter, and by 21.7% in the third quarter.

Revisions have raised the level of labour income by $204 million in the first quarter and by $636 million in the second quarter. (By industry groups, the second quarter upward revisions were very widespread.) As a result, the rates of increase of labour income have been raised in both the first and the second quarters, but especially in the latter which now appears to have risen by an exceptionally strong 4.0% instead of 3.2% as first published, and which already contained the effect of unusually large retroactive payments by governments. The rise in the third quarter was of 2.1%, with the principal gains being shown by retail trade, up 3.2%, and by the manufacturing industries, up 1.9%. After a 5.8% increase in the second quarter, wages and salaries in the construction industry declined slightly, partly reflecting labour disputes in the third quarter.

Personal income and personal disposable income showed lower rates of increase in the third quarter than in the first two quarters of the year. This was especially true of personal disposable income, which slowed to a growth of 1.4% after making impressive gains of 4.1% in the second quarter and of 3.0% in the first quarter. In addition to the dampening impact of the slowdown in wages and salaries, after the unusually strong second quarter gain, personal disposable income was also affected by irregularly large personal income taxes in the third quarter. Personal saving apparently fell in the third quarter, as did the saving ratio (personal saving as a proportion of personal disposable income), from 8.6% to 8.0%. However, saving data, being derived residually, is sometimes very unreliable, especially when calculated on the basis of preliminary information. Thus, upward revisions to some income series in the second quarter, particularly of wages and salaries, coupled with downward revisions in income taxes, had the effect of raising the saving estimate for that quarter by almost $1.5 billion. The saving ratio for the second quarter appears to have remained at approximately the same level as in the first quarter, instead of dropping sharply as first observed.

Price Movements

The implicit price index for GNP rose by 0.9% in the third quarter compared with a 1.3% increase in the second quarter. However, the movement of the index was affected by the irregularly high retroactive payments in wages and salaries by governments in the second quarter, because such payments are entirely reflected in the price component and leave real expenditure unchanged. If the effect of these payments were removed from the implicit price index, the rate of increase in the second and third quarters would be approximately the same, at around 1.0%.

The implicit price of personal expenditure rose at a lesser rate than in the second quarter, because of a marked slowdown in the rate of increase shown by the implicit price index for non-durable goods, from 2.2% in the second quarter to 0.7% in the third quarter. This deceleration in the non-durable goods implicit price index was mainly due to the food component, which showed a lower rate of increase following a significant rise in the second quarter. Lower increases were also recorded in the prices of fuel, gas and oil, and reading material. There was, however, an acceleration in the rate of price increase of alcoholic beverages, and of gas and electricity. In semi-durables, the major price increase was shown by clothing and footwear. In the durable goods category, the implicit price index of which rose by a moderate 0.3%, there was a notable deceleration in the rate of increase of the new and used passenger car component, from a 1.4% rise in the second quarter down to a 0.6% rise. The implicit price index for services rose by 1.0%, approximately the same rate as in the previous four quarters.

The acceleration in the rate of increase of the implicit price index for gross fixed capital formation was due to the materials cost component of the residential construction price index, which rose abruptly reflecting demand pressure, especially on lumber, the price of which rose by 6%, and other wood building materials. The impact of the rise in materials prices more than offset a lessening in the rate of increase of the wage rate component, resulting in the sharp climb of the residential implicit price index, from a rise of 0.8% in the previous quarter, to one of 3.0% in the third quarter. By contrast, the price index for non-residential construction rose at a somewhat lower rate in the third quarter than in the second quarter. This was mostly due to the fact that materials prices did not climb as sharply in non-residential construction, largely because lumber has a smaller weight in that cost index. The implicit price index for machinery and equipment rose by 1.0%, approximately the same rate as in the second quarter.

Both the export and the import implicit price indexes rose at sharply accelerated rates in the third quarter. The 1.7% increase in the export price index reflected sharp jumps in the prices of lumber, nickel, zinc, and of some steel products. The export implicit price index had shown little change in recent previous quarters, except for a 0.9% decline in the first quarter. The price index for imports rose by 2.2%, compared with a 1.2% rise in the second quarter.

Selected Implicit Price Indexes – Seasonally Adjusted[1]

Percentage change from the previous quarter

	1970				1971		
	I	II	III	IV	I	II	III
Personal expenditure on consumer goods and services	1.6	0.4	0.2	-0.1	0.5	1.2	0.9
Durable goods	2.2	—	—	—	0.9	0.4	0.3
Semi-durable goods	0.4	0.4	0.3	0.1	-0.6	0.8	1.0
Non-durable goods	1.2	0.4	-0.5	-1.0	0.2	2.2	0.7
Services	1.4	0.6	1.0	1.0	1.1	1.0	1.0
Government current expenditure on goods and services	-1.6	4.0	1.9	0.9	1.6	2.5	-0.4
Business gross fixed capital formation	1.0	0.4	0.4	1.4	0.7	1.4	2.0
Residential construction	1.2	1.2	1.2	1.7	0.8	0.8	3.0
Non-residential construction	0.6	-0.1	1.0	1.3	0.6	2.3	1.9
Machinery and equipment	1.2	0.8	-0.3	0.3	0.6	1.1	1.0
Exports of goods and services	2.1	0.4	0.1	—	-0.9	0.2	1.7
Imports of goods and services	0.7	0.5	-0.8	-0.6	0.7	1.2	2.2
Gross National Expenditure	2.0	0.6	0.8	0.1	0.7	1.3	0.9
Gross National Expenditure excluding value of physical change in inventories	1.4	0.8	0.8	0.4	0.6	1.2	0.8

[1] Implicit price indexes are currently weighted (Paasche) and therefore reflect changes in expenditure patterns as well as price changes of individual items.

The Government Sector

Total current government expenditures of all levels of government combined (excluding intra-governmental transfers) rose by $1,556 million, 5.3% above the second quarter rate. Higher current spending on goods and services accounted for about one third of the increase. There were notable increases in provincial and local government expenditures on goods and services, although these were partially offset by a decline in federal spending. Capital outlays declined slightly, mainly due to decreases at the federal and provincial levels. A rise equivalent to that in expenditures on goods and services took place in transfer payments to persons. Most of this increase was concentrated at the provincial level where there were higher transfers to post-secondary educational institutions and benevalent associations. All other expenditure categories also showed increases.

Total government revenues of all levels of government combined increased by 4.7%, of $1,512 million, in the quarter. The greater part of the rise was accounted for by higher returns from personal income taxes at both the federal and provincial levels of government. Other major rises took place in revenues from indirect taxes, investment income and corporate tax liabilities, particularly at the federal level.

With the total revenues and total expenditures of all governments combined rising by approximately the same amounts, the surplus of the government sector, on a national accounts basis and seasonally adjusted at annual rates, showed little change in the quarter. However, sharp movements occurred at the individual levels of government. The federal government moved from a deficit of $420 million in the second quarter to a surplus of $240 million in the third quarter. At the provincial level, an unusually sharp increase in transfer payments to local governments reinforced the rise in other expenditures with the result that the surplus of $96 million in the second quarter became a deficit of $856 million in the third quarter. The position of local governments, reflecting the notable rise in transfer payments from provincial governments, became a surplus of $88 million from a deficit of $220 million in the second quarter.

(Continued from page 6)

this will allow for an examination of facets of university education which have been obscured heretofore.

The characteristics of students have been the concern of another pilot project in Ontario where a collaborative data collection system has been developed in the last month with the Department of Colleges and Universities of Ontario. In this case, most of the universities have arranged for the direct transfer of individualized student records consisting of about 40 elements on computer tapes to Statistics Canada.

Preliminary discussions have taken place with western university officials to jointly launch a pilot study on teaching staff. At a later date, possibly in Quebec, the collection of statistics on facilities will be initiated.

These isolated regional sub-systems will eventually be pieced together into one total system. The complete integrated education information system will then be available to all, offering the nation standardized tools for data collection, processing and analysis. With the present high level of cooperation, indications are that by 1973 Canada will have an advanced system of information in the field of higher education.

4. In addition, inroads have already been made at the post-secondary non-university level. In mid-November, 1971, exploratory meetings were held between Statistics Canada and community college officials of the Atlantic provinces, and recently with western officials of community colleges and related institutions, with a view to the development of a student information system along the lines of the university pilot project in Ontario.

5. A system parallel to the above will be established at the elementary and secondary levels, although this has not yet begun.

6. Eventually, comprehensive computerized data files will exist on teachers, students, finance and facilities at all levels of education in Canada. Each file will contain a multitude of socio-economic characteristics, ready to be linked to data in the other files.

Uses of the Information System

1. Within each type of file useful links can be drawn. For example, since teachers' files cover a range of characteristics which relate to experience, education, salary, specialization etc., relationships between salaries and qualifications, years of experience and mobility, will be available for analysis on a regional and a national basis. The files will permit a study of mobility, supply and demand, and other factors.

The importance of information on the teaching component of the educational enterprise cannot be overstated. Nearly 70% of the total Canadian elementary-secondary cost of $5.3 billion is teaching cost; some 50% of the total devoted to university education ($1.6 billion) is teaching cost. On economic planning grounds alone it appears justifiable to commit significant resources to the creation of a complete information base on teachers at all levels of education.

Further, the university teachers' file creates interesting possibilities related to the development of research registers in specialized areas. The expansion of the individual files will make it possible for Statistics Canada to maintain an up-to-date record of research activity by discipline for each of the 26,000 full-time university teachers in Canada. This could prove to be a valuable tool for the researchers themselves and for funding agencies. In addition, it could provide useful information for the rationalization of research activity.

2. Various cross-tabulations of characteristics of teachers, students, and finance will be possible. For example, if there is a trend to an increasing number of students to select mathematics at university one could determine: which courses are most populated; the number, qualifications and salaries of staff teaching those courses; the cost of these courses; and the eventual occupational position and salary of these students.

3. The establishment of a **Ministry of State for Science** indicates a growing national concern about highly qualified manpower, science policy, and research. It is expected that information made available from Statistics Canada's information system will play an important role in policy formulation.

4. In general, education planners and policy-makers in federal, provincial and local governments, school boards, teachers' federations and research institutions will utilize the multi-dimensional information generated by the education information system.

5. Suppliers of data (universities, colleges, governments, schools etc.) will request cross-tabulations and information about their institution, along with comparative data from other similar (but unnamed) institutions across Canada, for their policy making.

6. Citizens' groups, and those in the private sector will request data from this information system. The Canadian public in general is entitled to know all about the nation's education, an activity which occupies one-third of its entire population and requires one-fifth of all tax monies to keep it in operation.

Effect on the Education Division

Until very recently it was believed that the prime user of education statistics was the researcher, and the collecting, processing and publishing of education data was carried out with this in mind. It is now becoming increasingly clear that there is in fact an array of important disparate users, only one of which is the researcher. A more accurate picture is that the education planner is the prime user of education statistics. His needs for data are obvious: collectively and individually, the education decision-maker is a major determinant of the quantity and quality of education in Canada.

This has influenced the Education Division to outline new objectives and a new orientation, and statistics are now beginning to be collected, processed and transmitted in a form which permits rapid and ready use by planners. The result is the following:

1. New data items are being collected which are needed by planners. Hopefully, gaps in detail in what is being collected and what is needed, will narrow.
2. A computerized nation-wide education information system is steadily being developed to assist major education data users.
3. In addition to presenting education data in tabular form, considerable textual material will increasingly be presented in the form of analysis, commentary and interpretation, made by Statistics Canada. The, computerized system will be a major tool in facilitating these changes. No value judgments will be made by Statistics Canada.
4. In addition to disseminating education information through publications, data will be retrieved from computer files to meet specific consumer requests. This information may be forwarded in print-outs, but may also be accompanied by analysis, commentary or interpretation taking the format of a special report. Such a process offers a rapid and tailor-made information flow. Frequently the requester of data may be the institution which initially supplied some of the data to the files. Collaboration of this nature is basic to the improvement of the quantity and quality of available education statistics. Only in this way will the Education Division, a federal agency in Canadian education, be able to provide the service it feels the public deserves.
5. As a federal agency in Canadian education, the Education Division of Statistics Canada will increase its public statements on all aspects of education. Gradually the Division will be able to offer frequent, integrated, concise, and timely general statements in addition to the detailed, historical data it will also continue to produce.

BINDING SECT. MAY 10 1972
